We Grow Trees and Plants by the Million

THE QUALITY OF THE STOCK supplied by us during the quarter of a century of business life has caused an ever-increasing demand for Harrison's trees and plants. To supply this we have had to add to our facilities from year to year until now our nurseries cover a thousand acres, every one of which is under cultivation and under the personal supervision of one or the other of the members of our firm.

WE KNOW HOW to grow strong and healthy trees with plenty of fibrous roots, well ripened wood and of great vitality. We make it a point to grow the different kinds of trees and plants on soil best adapted to their highest development.

WE ARE PREPARED to take care of your wants in a highly efficient and satisfactory manner—to better advantage than ever before. Our facilities for handling large as well as small orders, are among the best in the country. Large packing sheds and efficient help enable us to fill all orders promptly and intelligently.

IT WILL PAY YOU to place your order with us for trees and plants of quality. No other Nursery exercises more care to serve customers satisfactorily, while better stock than ours cannot be bought.

LET US SHOW YOU WHAT we can do! Our business methods will please you, while the quality of our stock will be convincing.

Very respectfully yours,

J. G. HARRISON & SON

Special Attention is called to the fact that all illustrations in this catalogue are reproduced from photographs. They convey an accurate idea, therefore, of the appearance in real life of the fruits, etc., we illustrate. All the descriptions in the book have been rewritten with the purpose of carefully avoiding exaggeration. We are proud to be able to offer the best nursery stock in the most practical catalogue of its kind ever issued.

Please Read Carefully the Following

Order at once. Do not wait until you are ready to plant. We shall not ship, however, until the proper time, unless desired otherwise.

Write your name and address plainly. Giving shipping instructions, stating whether shipment is to be made by freight or express; also name of freight or express office. Without instructions, we shall ship as we think best.

Cash must invariably be sent with order unless otherwise agreed with firms with good bank reference.

Remittance may be made by bank draft, express or post-office money order, cash by registered letter or stamps for fractional parts of a dollar.

Special low express rates are granted by all express companies on shipment of plants, which are carried at 20 per cent less than merchandise of other character. We ship by Adams Express Company.

No charges are made for packing and delivery to transportation company at prices given in this catalogue. Where special quotations are made, cost of the boxing and baling will be charged to customers. We pack as lightly as is consistent with safe transportation.

We ship trees in the fall as soon as the leaves are off, plants about October first, and continue as long as the weather is mild. In the spring we can ship as early as February to the South, and as late as May to the North. Be sure to have your trees shipped **before you need them** so that they reach you in good time.

If frozen when received bury the package unopened in well-drained ground, or place it in a cool cellar where it will thaw out gradually without being exposed to the air.

If they appear dry or shriveled through delay in transit, take them from the package and plunge into a tub of water; or bury the roots in the ground in an inclining position, cover one-half or more of the tops with earth and thoroughly soak with water. Let them stand until they regain their fresh appearance, when they may be planted.

Claims for deductions should be made within five days after receipt of goods.

Guarantee.—We exercise the greatest care to have every tree and plant true to name. We are ready, on proper proof, to replace free of charge, anything sent by us that proves untrue to label. But it is understood and agreed that we are not to be held liable for a greater sum than that paid us for the plants in question.

J. G. HARRISON & SON, Berlin, Md.

Trees by Mail. Our customers who live far from us are demanding a line of trees we can send by mail to save the extra express charge. To meet this demand we are making the following offer, which will certainly please all who wish to try one-year trees. We can supply most of the varieties as in the larger sizes, but in case we are out of any variety of one-year stock, we reserve the right to substitute a variety equally good and same season. All trees in this list will be well wrapped and packed and sent post-paid to your door at prices named, except where otherwise noted:

	Each	Doz.	100		Each	Doz.	100
Apple, 2 feet	\$0 20	\$2 00	\$10 00	Plum, 2 feet	\$0 20	\$2 00	\$10 00
Peach, 2 feet	10	1 00	5 00	Cherry, 2 feet	20	2 00	10 00
Pear, 2 feet	20	2 00	10 00				

HOW TO ORDER This Catalogue is Our Salesman. Fill out this Order Sheet with the items you want to buy, enclosing remittance and mail all to us in enclosed envelope. We have filled orders this way for years and are well known all through the country. You can learn of our responsibility through any commercial agency, bank, banker, or of the postmaster.

 We pack and ship all winter to Southern States from trees stored in our large cellars. **Our regular Fall Shipping Season** opens from October first. **State positively** how we are to ship, whether by Freight, Express or Mail. If by Freight or Express, give name of Railroad Station and your Post Office.

All Agreements and Contracts are made subject to loss of Crop by Drought, Floods, Fire, Insects, or other unavoidable causes. All quotations are made subject to stock being sold on receipt of order.

In Making Your Order, Please Give the Price and Size to Avoid Delays and Errors

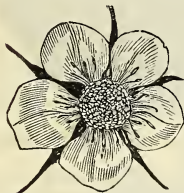

FINE-LOOKING PATCHES LIKE THIS MAY BE HAD BY PLANTING OUR THRIFTY PLANTS

STRAWBERRIES

We have over sixty acres of Strawberries, with nearly six millions of strong, sturdy plants. As these plants have been grown on our own soil and under our personal supervision, we can absolutely guarantee their quality. Every season we experiment with many new kinds, studying the strong and weak points they show. We carefully eliminate from our stock all the old varieties that are surpassed by new introductions. The following list contains

the cream of the standard sorts and the best of the new varieties, which have proven worthy of general distribution.

PERFECT BLOSSOM

Our efforts to supply "the best only" are appreciated by customers in nearly every state of the Union. Harrison's Strawberries prove to be money-makers to the men who know how to grow them, and we invite those that have no Strawberry bed as yet, to give our plants a trial. They are sure to prove a source of genuine satisfaction and to bear an abundance of luscious fruits if properly planted and treated.

IMPERFECT BLOSSOM

The blossoms of all varieties of Strawberries are either "bi-sexual," or perfect, or they are "pistillate," or imperfect. In order to get best results with imperfect sorts, they should be planted together with perfect sorts, planting at least every third or fourth row with a perfect bloomer. The imperfectly blooming variety will then be properly fertilized and will prove very prolific. After each variety name we have indicated whether the variety is a perfect (Per.) or an imperfect (Imp.) bloomer.

Descriptive List of Varieties

Aroma. (Per.) Late. The strong, sturdy plants bear an abundance of large, conical fruits. Round, regular shape, dark, glossy red, and of excellent quality.

Auto. (Per.) Originated in Delaware, where it is highly esteemed as a sure cropper. The unusually vigorous plants bear fine crops, even in dry weather, when other sorts are apt to be short. The large, handsome berries are borne well above the ground. Of large size and excellent quality.

Bedar Wood. (Per.) Medium early. The plants are not very large, but have unusually large roots, which extend deep into the soil. On account of this, they stand dry weather better than most sorts. Foliage dark green, upright, and rather long and narrow. A general favorite, as it bears large crops.

Bismarck. (Per.) Late. Bright scarlet berries of unusual size. They resemble the Bubach in color, shape and flavor, and are very firm for such a large

berry. This is one of the most productive varieties in cultivation, furnishing especially large crops on rich, low land.

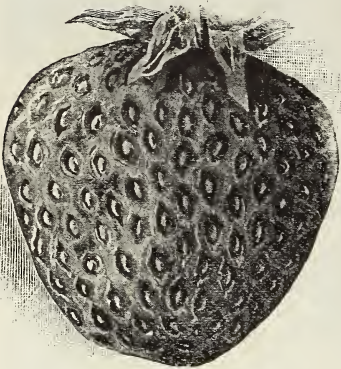

Brandywine. (Per.) Late. The strong, upright-growing plants produce an abundance of very large berries on erect fruit stems. They are of good color and shape, and possess a very fine, peculiar flavor. Begins to ripen in midseason, and continues until blossoms are killed by frost.

Bubach. (Imp.) Late. The plants have dark, waxy green foliage, very stout crown and short leaf- and fruit-stems. The fruit is of largest size, often cock's-combed, thick through, very broad, meaty and fine-grained. Berries of this sort often weigh one to one and one-quarter ounces each. This variety is an enormous cropper, and will give satisfactory results even on poor soil, though it gives best returns on good soil. One of the best for market purposes.

STRAWBERRIES, continued

Chesapeake. (Per.) Late. Foliage is very dark green, thick, leathery and free from disease. The medium-sized fruits

are carried on unusually strong, upright stems, which hold them well above the ground. It is very productive on light soils, equal in size to most standard sorts, while its shipping qualities far excel those of other popular market varieties. In eating qualities it ranks among the best. Quality and firmness are combined in a high degree in this remarkable sort.

CRESCENT STRAWBERRY

Clyde. (Per.) Medium. An exceedingly prolific variety, which does particularly well in dry, sunny locations. The berries are produced so abundantly that they nearly cover the ground around the plants, which are unable to provide enough foliage to protect the berries. The fruit is of large size, regular shape, with meat of rich pink color and delicate flavor. Excellent sort for canners or shipment to distant markets.

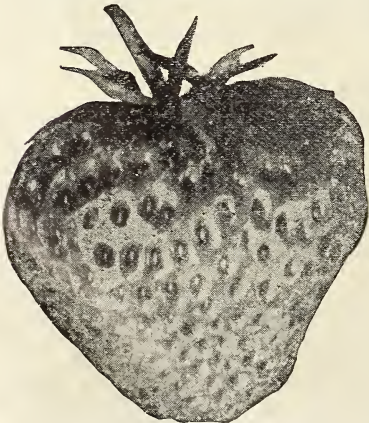

Crescent. (Imp.) Medium early. One of the most popular sorts, as it gives excellent results with little care and cultivation. The berries are of medium size, closely grained and solidly fleshy. They are very juicy and possess a fine, rather tart flavor. Splendid for canners, and a good market sort.

Crimson Cluster. (Per.) Late. Supposed to be a seedling of Gandy, which variety it resembles in size, shape and color. However, the plants are much thriftier and produce more foliage, which affords better protection for blossoms and fruit.

Dayton. (Per.) Early. The plants make a strong growth, and are very prolific. The berries are of good size, earliness considered. They are very firm, and of odd flavor,—two valuable qualities in an early berry.

Early Hathaway. (Per.) Medium early. The plants are very thrifty, and have beautiful, dark waxy green foliage. The berries are produced medium early, are of beautiful red color, firm and of fine quality. Very prolific sort, hardy and desirable in every way.

Gandy. (Per.) Late. The standard late variety, and one of the best that has ever been sent out. Produces best results in heavy clay soils or well-drained bottom lands. The strong, vigorous plants have broad, dark green foliage. The berries are borne on long, upright fruit stems, which hold the fruit above the foliage. Of beautiful bright red color, with a smooth, shiny surface. May be left on the vines several days after getting ripe, without deteriorating. For shipment to distant markets, it is without an equal.

GANDY STRAWBERRY

Gladstone. (Per.) Early to midseason. The exceedingly vigorous and robust plants have large foliage and produce immense

crops of berries on good soil. The fruits are of uniform shape, very large and firm. They are of rich crimson color, and the meat is of excellent quality. Commands highest market prices.

Glen Mary. (Per.) Medium. Strong, upright-growing plants, with large, dark green foliage. In rich ground, under high cultivation, it produces remarkably good crops. The berries are large, deep red; the meat is firm, juicy, and of unusually good flavor. Ideal for canning and preserving. Best shipping sort.

Haverland. (Imp.) Medium early. One of the most productive varieties in cultivation, sending out strong, vigorous runners. The berries are of very tempting appearance, from medium to large in size, bright red, rather long and pointed. Should be well pollenized with perfect-blooming sort, as this will improve the firmness of the berries. Very hardy and one of the best on our list.

Johnson's Early. (Per.) Early. The plants make a thrifty, healthy growth, sending out many runners. The berries are very large, of glossy deep red color, and of excellent flavor.

Kansas. (Imp.) Late. The drought-resisting qualities of this variety are marvelous. The plants are very productive. The berries are of fine shape, medium size, and of brilliant crimson color, which extends through the meat. Very firm, and an excellent shipper.

King Philip. (Per.) Late. Both plants and berries resemble those of Gandy, but it is said to be a much more productive sort. Highly recommended.

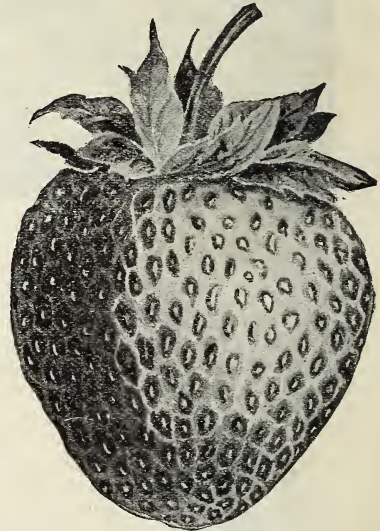

Klondike. (Per.) Medium. Although its blossoms are perfect, it has no great pollenizing power and should be planted near other sorts of about the same season. **THE PARSON BEAUTY STRAWBERRY** (page 3) plants make a remarkable growth, forming dense mats of foliage, with many crowns. The berries are produced in great abundance, are of beautiful uniform shape, and rich, dark red color. The flavor is mild, and delicious. Illustrated in colors on front cover.

Lady Thompson. (Per.) Early. The strong, upright plants root deeply, and send out an abundance of long runners. Succeeds well in a great variety of soils, but does best in rich loamy or sandy soil. Berries are medium large, regularly shaped, of glossy pink color, solidly meaty, and of excellent flavor.

Mark Hanna. (Per.) Late. Seedling of Bubach, which it resembles. The plants are strong, thrifty growers, and bear profusely. The berries do not average as large as those of the parent sort, but surpass them with their delicate, cherry-like flavor. Produces big crops of fancy fruit under normal conditions.

Marshall. (Per.) Large, strong plants with healthy foliage. The berries are large, of perfect shape and of attractive, dark red color. For best results, it should be planted in rich soil, and should receive best care. It will then produce an abundance of fancy fruit.

McKinley. (Per.) Medium to late. Plants are of good size, thrifty, healthy growers, with many strong runners. Fruit large and firm, of round, conical shape and bright red color, which extends clear through the meat. Always attractive and of highest quality.

STRAWBERRIES, continued

Michel's Early. (Per.) Extra early. The healthy plants make a rampant growth, set many crowns and develop an abundance of choice fruit. Berries are of a scarlet color, possess a rich, mild, acid flavor and are very firm and solidly meaty. An old and very popular variety.

Midnight. (Per.) The latest sort on our list, ripening long after the main crop of Strawberries. The berries are large, broad, thick through, of pink color, with white flesh. One of the richest and sweetest and highly recommended for family use.

New Home. (Per.) Very late. Extra-large, bright red berries, which, for firmness and keeping qualities, have no equal. Although in dry seasons the plants do not produce well, in normal years they will yield abundant crops of splendid fruit. A good shipper.

SAMPLE STRAWBERRY

ular sort, with berries of beautiful carmine color. They are large, very firm, and of unusually delicious flavor. Long fruit stems make picking of this variety very easy. A fine shipper and suitable for fancy trade. A leading variety with many large growers.

Oak's Early. (Per.) Extra early. Originated in Somerset county, Maryland. It is an exceedingly strong grower, very productive, and does well in most any soil. The berries are of beautiful appearance and excellent quality.

New York. (Per.) Medium to late. The plants are of upright growth, with large foliage, and many strong crowns. The berries are of extra-large size, of dark red, shiny color and are produced in great quantities. A very choice sort.

Nick Ohmer. (Per.) Medium to late. A most popular.

Parsons' Beauty. (Per.) Medium. This sort enjoys almost universal popularity and succeeds in a great variety of soils. It is a strong, healthy grower, making, under ordinary conditions, twice as many plants to the acre as other standard sorts. It begins to ripen in mid-season and extends its season until late sorts, as Gandy, are ready. Berries medium to large, of dark red color, thick through and rather blunt. They possess a mild and delicious flavor, and never fail to attract favorable attention in the market. One of the best money-makers and a very satisfactory sort in every respect.

SENATOR DUNLAP STRAWBERRY

Rough Rider. (Per.) Late. The sturdy, rugged plants are of spreading habit, with thick, leathery foliage. The berries are of largest size, dark red color and very firm. The flesh is of rich, crimson texture, very juicy and of most delicious flavor. One of the most productive sorts on our list, fruiting better the second season than during the first.

Sample. (Imp.) Late. Of large size and yields enormous quantities of berries of excellent quality. The fruits retain their large size until the end of the season. They are of bright red color, very firm and of rich flavor. A standard shipping variety; also fine for family use. Many excellent qualities are combined in this remarkable sort.

Senator Dunlap. (Per.) Late. The plants are strong, healthy growers, with bright green, upright foliage. The berries are large, of handsome, dark red color, uniform in size and shape, which is conical. The meat is red through, firm, juicy, and of fine texture. The flavor is very delicate. The popularity of this excellent sort increases steadily, owing to the extraordinary records which it has to its credit.

MARSHALL STRAWBERRIES

A BUNDLE OF STRAWBERRY PLANTS

STRAWBERRIES, continued

Stephen's Late Champion. (Per.) Late. A variety yielding splendid crops of fine quality. In productiveness it easily leads the rest of the standard late sorts, while, in appearance, size and shipping qualities, it beats them all for nearby market. Dark red and of exceedingly rich flavor. They are carried on strong, erect stems, which hold them well above the ground. We consider this the ideal late berry for shipping to nearby markets.

Superior. (Per.) Medium early. A very large, productive sort, which stands hot weather to perfection. The berries are large, of good shape and beautiful, glossy red color. On rich ground, it yields surprisingly large crops.

Tennessee Prolific. (Per.) Early. The plants make a remarkable growth and should be thinned out in order to produce largest berries. The berries are of medium size, rather long, and of bright crimson color. The flesh is pink, fine-grained and very juicy.

Tilghman's Favorite. Medium late. A good market variety; originated by one of the leading Strawberry growers in Wicomico county, Maryland.

Virginia. (Per.) Very early. The strong, healthy plants have remarkably dark green foliage. They are very prolific, producing berries of uniformly large size for an early sort. The fruits are of glossy, bright red color, and are of very attractive appearance.

Warfield. (Imp.) Early. Rampant grower, with many runners, one-half of which should be thinned out to admit sufficient sunlight and air for development of best fruit. The berries are of glossy, dark red color. The meat is rich, dark red, exceedingly juicy and very firm. A most popular canning variety and superior shipper.

Wolverton. (Per.) Early. Succeeds well in almost any soil, but does best in a sandy loam. An extremely popular variety used extensively to plant in connection with medium early or late sorts with imperfect blossoms. The large crimson berries have fine-grained flesh of pink color and very delicate mild flavor.

PRICES; All varieties, except those noted below, by mail, 25 cts. per doz., 50 for 60 cts., \$1 per 100. By express, not prepaid, 25 for 25 cts., 75 cts. per 100, \$1.75 per 500, \$3 per 1,000, \$13.75 per 5,000

Bubach. By mail, 25 cts. per doz., 60 cts. for 50, \$1 per 100; by express, \$2 for 500, \$3.50 per 1,000.

Chesapeake. By mail, 60 cts. per doz., 80 cts. for 50, \$1.50 per 100; by express, \$1.25 per 100, \$3 for 500, \$5 per 1,000.

All prices include packing

SPECIAL SELECTIONS

For the benefit of customers not familiar with varieties of Strawberries suitable for their localities, we will send our selection;

12 plants, postpaid	\$0 25	500 plants, by express, not prepaid	\$1 75
50 plants, postpaid	60	1,000 plants, by express, not prepaid	3 00
100 plants, postpaid	1 00	5,000 plants, by express, not prepaid	13 75

You may have the benefit of our twenty years of experience in fruiting the best varieties.

Special Strawberry Collections for Boys and Girls

We are interested in boys and girls—they are the men and women of tomorrow. Start them right in life and they will get along well in the future. Encourage them to work in the garden. Give them some ground and let them plant a strawberry bed. It will be of highly educational value to them to see how nature rewards efforts bestowed upon the soil.

No. 1. Boys' Collection, for \$1, postpaid

25 Auto, 25 Bismarck, 25 Crimson Cluster, 25 Senator Dunlap.

No. 2. Girls' Collection, for \$1, postpaid

25 Nick Ohmer, 25 Mark Hanna, 25 New Home, 25 Midnight.

No. 3. \$1, by express, not prepaid

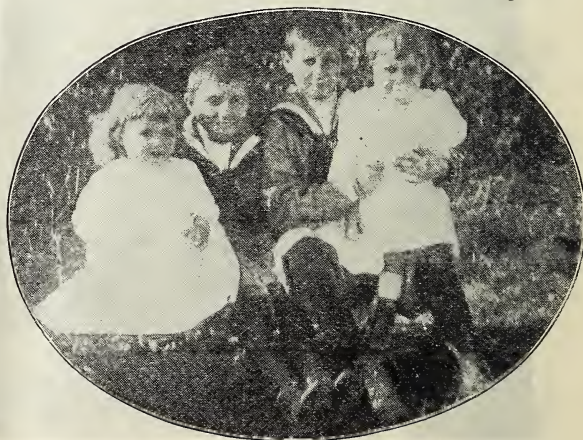

50 Kansas, 50 Klondike, 50 Haverland, 50 Star, 50 Gandy.

No. 4. \$2, by express, not prepaid

100 Warfield, 100 Tennessee, 100 McKinley, 100 Oak's Early, 100 Sample.

No. 5. Family Collection, from May to June 15, for \$3, by express

250 Marshall, 250 Star, 250 Mark Hanna, 250 Tennessee, 250 Gandy

These bouncing boys represent the third generation of Harrison's. All have their own strawberry beds

PRUNING PEACH TREES IN OUR NURSERY

PEACHES

Peach trees have been one of our two leading specialties for the past twenty years, during which time we have probably grown more of these trees than any other firm in America. We carry nearly 700,000 fine trees, in about 100 distinct varieties. We plant the best natural pits. All buds are carefully selected and the trees have our personal attention at all times. We have a fruiting orchard of over 100 varieties. No other firm expends so much time and money to keep the stock pure and clean, while better and healthier trees cannot be bought anywhere at any price.

Grading Peach Trees

Our one-year Peach trees are graded in six classes. This not only gives us a more uniform lot of trees, but it also enables customers to select the desired sizes easily.

We heartily recommend the buying of the larger grades, especially where only a few trees are wanted. They are easily grown, and the buyer is reasonably sure of success. The smallest and cheapest grades we recommend only to customers who know how to handle them and who are willing to bestow a great deal of care and attention upon the new planting. But we once more reiterate our statement that, no matter whether small or large grades are bought, customers will always get the best that money can buy.

NEW VARIETIES

Ray Peach. We introduced this valuable variety in the year 1901. It has been thoroughly tested by one of the largest fruit-growers of the Peninsula, and has proven the most valuable Peach of its season in an orchard of more than a dozen varieties. It is of the Chinese strain, ripening here from August 15th to 25th. Above medium size, as large as Belle of Georgia or Moore's Favorite; white flesh, with a red blush; firm, and a good shipper and a good seller on the market. Trees are strong growers, so much so that they are noticeable from other varieties. The Ray is a regular bearer. The fruit continues in ripening longer than any other variety we know, and we earnestly recommend our customers to plant this valuable Peach for profit in all commercial orchards.

Mayflower. The earliest variety known, ripening nearly a week before Sneed. Extremely valuable as a market variety, and one of the leading sellers in southern states. The strong, thrifty trees bear abundantly. The fruit is of good size, practically red all over; the meat is very firm and of good flavor. Many enthusiastic testimonials from growers prove the real merit of this new sort

TWELVE WINNERS

Tested carefully through many years, they have proven to be money-makers Every variety is first-class in every respect.

CARMAN PEACH SIX MONTHS AFTER TRANSPLANTING

BELLE OF GEORGIA. Ripens from August 1 to August 15. Tree grows rapidly and is very productive. Fruit uniformly large and showy. Skin white, with red cheek. Flesh white, firm, and of excellent flavor Freestone.

CARMAN. Middle of August. Seedling of Elberta, with larger and darker foliage. The trees are particularly suitable for growing on low, wet grounds where other sorts do not succeed. They are very hardy and productive. Fruit large, broad, oval in form, and practically rot-proof. Skin yellowish white, flesh creamy white, tinged red, of good, sprightly flavor. Freestone.

CHAIRS' CHOICE. Last of August. Trees make a strong growth and bear well. The fruit is of extra-large size; skin yellow, with red cheek. The flesh is yellow, firm and of good quality. Freestone.

CHAMPION. Middle of August. Trees very hardy and productive. Fruits are of large size, of beautiful appearance and ship well. Skin creamy white, with red cheek. Flavor sweet and juicy. Freestone.

CRAWFORD LATE. Middle of August. One of the best late sorts. Trees are very vigorous. The superb fruit is of very large size, has yellow skin, with broad, dark red cheek. Flesh deep yellow, juicy and melting. Of rich, vinous flavor. Freestone. Illustrated in color on back cover.

ELBERTA. Early August. One of the most successful market varieties. The trees make a luxuriant growth, and are of splendid appearance. The fruit is very large. Skin golden yellow, faintly striped with red where exposed to the sun. The yellow flesh is very fine-grained, juicy, rich, sweet and of splendid flavor. This is an excellent shipping sort, and, on account of its handsome appearance, sells readily in glutted markets. Freestone.

FOX SEEDLING. Ripens in September. Trees are reliable bearers. The fruit is large, has white skin, with red cheek. Flesh melting and of good, sweet flavor. Desirable market sort. Freestone.

MOORE'S FAVORITE. August and September. Fruits are large, have white skin, with blush where exposed to the sun. Flesh white, tender and juicy. Very desirable sort. Freestone.

MOUNTAIN ROSE. Early August. Fruit large and round; skin light and dark red. Flesh is white, slightly stained at the stone, sweet and juicy. One of the best early Peaches and a most profitable market variety. Freestone.

OLDMIXON FREE. August. An excellent and well-known orchard variety, succeeding in a great variety of soils, and bearing well in all localities. The fruit is large; skin pale yellow, with red cheek. Flesh white, tender and of rich flavor. Freestone.

REEVE'S FAVORITE. September. The hardy and vigorous trees are very productive. The large, round fruits are yellow, with red cheek. Flesh deep yellow, red at stone, juicy, melting, and of excellent vinous flavor. Freestone.

STUMP. End of September. One of the best-known market sorts. Trees are vigorous, healthy and very productive. Fruit very large, round; skin white, with bright red cheek. Flesh white, juicy, and of excellent flavor. Freestone.

General List of Standard Varieties

FIRST RIPENING

Admiral Dewey. July. Trees are of strong, symmetrical growth, hardy and very productive. Fruit of good size, flesh yellow, of uniform texture. Freestone.

Alexander. A vigorous and very productive sort. Fruit medium to large, nearly round. Skin greenish white, almost covered with deep red. Flesh very firm, white, sweet and juicy, adhering slightly to the stone.

Amsden June. Closely resembles Alexander in size, shape and general appearance, but is said to possess a better flavor. Clingstone.

Eureka. In southern states it ripens as early as middle of June. Fruits are of medium size, oblong. Skin creamy white, with red cheek. When fully ripe the meat is tender, juicy and of delicious flavor. Semiclingstone.

STANDARD PEACHES, continued

Greensboro. Ripens as early as Alexander, growing to nearly double its size. Skin yellowish white, with crimson cheek; flesh white, very juicy and of fine quality. A most attractive and beautifully colored sort. Freestone.

Hieley. Very vigorous and hardy trees. Large fruit of rich, creamy white color with rich blush where the sun strikes it. The meat is firm and of excellent quality. An excellent shipping variety of handsome appearance. Freestone.

Mamie Ross. Seedling of Chinese Cling, which it resembles. Bears abundant crops very regularly. Fruit of good size; skin white, nearly covered with delicate carmine. Flesh firm, juicy and of good quality.

Slappey. Very hardy sort, which ripens as early as middle of June in Georgia. The handsome, yellow fruit is free of excessive rot and keeps splendidly. Flesh yellow, sweet, ripens thoroughly to the seed and possesses an excellent flavor. Freestone.

Sneed. One of the earliest Peaches known. Fruit of medium size, of creamy white color, with crimson blush. Flesh ripens evenly to the pit, is firm and of sweet flavor. Very productive sort, not inclined to rot.

Triumph. The strong trees begin to bear early and yield abundantly. Fruit large, yellow, with crimson cheek. Flesh yellow, firm, and of fine quality, ripening evenly to the stone. Very valuable for early market. Freestone.

Troth's Early. Very early. Of medium size. Skin white, with fine red cheek. Flesh of firm texture and excellent quality.

Victor. Originated in Texas, where it bears as early as May 15. Fruit medium to large; flesh white, and of pleasant subacid flavor. The trees bear every year. Semi-clingstone.

Waddell. One of the best keeping varieties, and a remarkable shipper. The fruits are medium to large, of creamy white color with red cheek. Flesh firm, white, and of rich, sweet flavor. Freestone.

Waterloo. Medium to large fruit, with greenish white flesh. Very juicy and possesses the sweet, vinous flavor. Semi-clingstone.

SECOND RIPENING

Early Rivers. One of the best varieties for home use and nearby markets. Fruits of large size, skin creamy white, with delicate pink cheeks. Flesh pink through, of rich, melting flavor. Freestone.

Lodge. A heavy and regular bearer. Trees hardy and of vigorous growth. Fruit of good size, flesh white, sweet and juicy. An excellent shipper which has proven to be a money-maker to those who grow it.

THIRD RIPENING

Champion. See description in Winners' list.

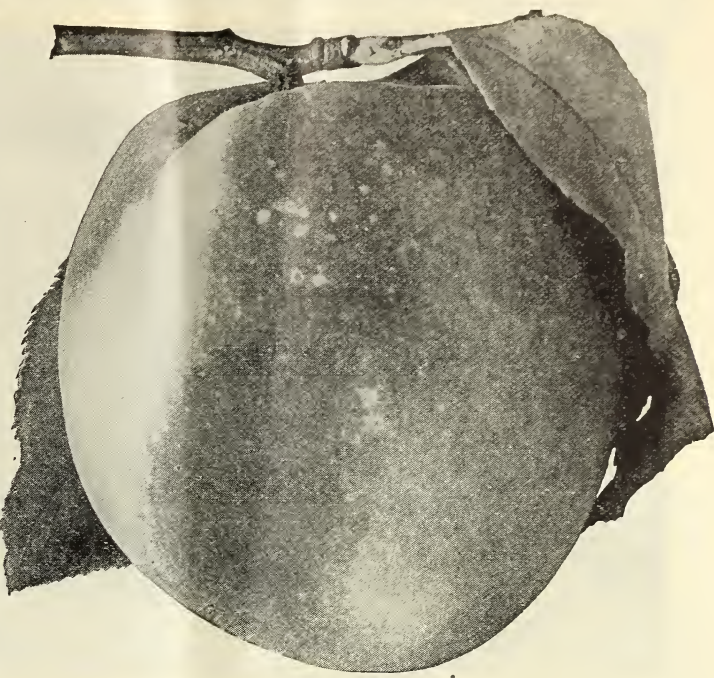

Chinese Cling. Fruit round and large, rather oval-shaped. Skin transparent, of creamy white color, beautifully mottled with carmine. Flesh creamy white, melting, and of rich, agreeable flavor.

Delaware. Very prolific sort, with fruit of large size. Skin delicately flushed and shaded with red. Flesh white, juicy and of rich flavor. Freestone.

Early Michigan. Trees hardy and prolific. They bear early. Fruit of medium size; skin white, with red cheek. Flesh white, firm, and of good quality. Freestone.

Lewis. Trees make a vigorous, healthy growth. Fruit of medium size, white, with crimson cheek. One of the earliest freestones.

Yellow St. John. Medium to large in size. Skin yellow, with dark red cheek; flesh yellow, juicy and of good flavor. Freestone.

ELBERTA PEACH

FOURTH RIPENING

Connecticut. Fruit large and handsome. Skin yellow, with red cheek. Meat of rich quality and superior flavor.

Connett's Southern Early. Seedling of the old Chinese Cling. Trees noted for their strong, vigorous growth. They bear extra-large fruit, of creamy white shade with blush cheeks. Flesh of fine quality. Freestone.

Foster. Resembles Crawford's Early, but the fruits are somewhat larger and are produced in greater quantities. Fruit of deep orange-red color. Flesh yellow, very juicy, with a rich subacid flavor. Freestone.

Large Early York. Very vigorous and productive sort. Fruit large, skin white, with red cheek. Flesh fine-grained, very juicy and of delicious flavor. Freestone.

Mary's Choice. Excellent sort for either family use or market. Fruit large to very large; skin yellow, blushed with red. Flesh firm, fine-grained and of superior flavor. Freestone.

FIFTH RIPENING

Bequett Free. A heavy and sure-cropping sort. Fruit of extra-good size, skin greenish white, shaded with red. Freestone.

Captain Ede. Very large fruit. Skin yellow, tinted with delicate carmine on one side. Ripens about one week before Elberta. An excellent shipper. Freestone.

Crawford Early. Trees vigorous and very productive. Fruit of oblong shape and good size. Skin yellow, with fine red cheek. Flesh yellow, juicy and of excellent, sweet flavor. Freestone.

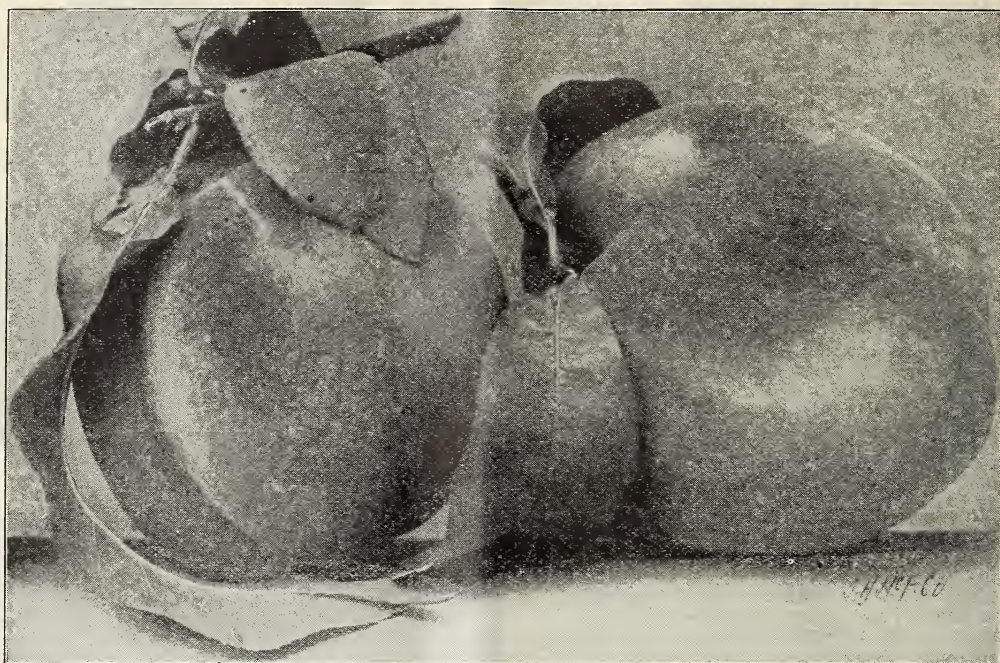

Christiana. A very large sort, of exceedingly handsome appearance. Skin yellow. Flesh firm, juicy, and of good flavor.

Elberta. See description in Winners' list.

Emma. Fruit very large, skin yellow, with light crimson cheek. Flesh yellow, fine-grained, melting, and of excellent quality.

Hobson's Choice. Ripens from ten days to two weeks before Elberta. Fruit very large, of yellow color. Freestone.

Kalamazoo. Trees are hardy, productive and bear early. The fruits are large, of golden yellow color, with crimson cheeks. Flesh thick through and yellow to the pit, which is very small. Quality is excellent. Freestone.

RAY PEACHES (see page 5)

STANDARD PEACHES, continued

Matthew's Beauty. Ripens later than Elberta, which it resembles. Skin golden yellow, beautifully streaked with red. Flesh yellow, firm, and of good flavor.

Newington Cling. Large to very large fruit of exceedingly handsome appearance. Flesh rich and juicy. Clingstone.

Oldmixon Free. See description in Winners' list.

Red Cheek Melocoton. One of the choicest and most extensively cultivated market sorts. Fruit large, of attractive shape. Skin yellow, with deep red cheeks. Flesh red at the stone, juicy, and of rich, vinous flavor. Freestone.

Reeves. See description in Winners' list.

Stump. See description in Winners' list.

SIXTH RIPENING

Bokara. Remarkably hardy and vigorous sort. The fruit is large, often measuring 7 inches in circumference. Skin yellow, with red cheek, very tough, making it a good shipping variety. Flesh firm, and of good quality. Keeps exceedingly well. Freestone.

Bray's Rare Ripe. A regularly and abundantly bearing sort, which is very profitable in many sections. Fruit large, creamy white, flushed with crimson. Flesh white, firm and of rich flavor.

Chairs'. See description in Winners' list.

Denton. Very profitable sort, resembling Elberta in size and shape, but ripening a few days later. Freestone.

Elberta Cling. Finest all-round cling on our list. Trees bear heavily. Fruit uniformly large and round. Skin yellow, firm and of excellent flavor.

Fitzgerald. A splendid sort, particularly remarkable for its hardiness. The large fruits are of golden yellow color, with red cheeks. Flesh yellow, firm, and of good quality. The pits are the smallest we have found in any Peach. Perfect freestones.

Fox Seedling. For description, see Winners' list.

Frances. Trees vigorous, hardy and very productive. Fruits large, with beautiful, yellow skin, and brilliant red cheeks. The flesh is very solid, of particularly fine melting flavor. As a shipper it is absolutely without a rival. Freestone.

Gold Drop. A very heavy bearer and profitable market sort. Fruit is large, yellow, and of good quality. Freestone.

Jennie Worthien. Fruit large, yellow. Flesh solid and of fine quality.

Lemon Cling. Very large, of oblong shape. Skin yellow, with red cheek. Flesh yellow through, very firm, and of rich, subacid flavor. Fine for preserving. Clingstone.

Lemon Free. Trees very hardy and immensely productive. Fruit lemon color, and oblong shape. Freestone.

New Prolific. Very popular market sort. Very large fruits of yellow color, with bluish cheeks. Meat firm, juicy, and of finest flavor. Freestone.

Niagara. Trees resemble those of Elberta in habit and growth. Fruit large, yellow and of strictly fancy appearance. Bears year after year. A fine shipper.

Stephen's Rare Ripe. Trees are very productive and remarkably free from disease. Fruits are white, attractively shaded with red. Flesh firm, juicy, and of superior quality. Freestone.

SEVENTH RIPENING

Cobler. Trees strong, healthy, and very prolific. Fruit large, very firm, and of good quality. A splendid keeper.

Crosby. Hardy and a sure cropper. Trees very vigorous. Fruit of medium size, bright orange-yellow, streaked and blotched with carmine. Freestone.

Edgemont Beauty. A most valuable sort, grown extensively in our state and in West Virginia. Fruits large, yellow, with bluish cheeks where exposed to the sun. Flesh yellow through and of very sweet flavor. A winner!

Engle's Mammoth. Fruit large, round to oval. Skin yellow, with red cheek. Flesh yellow, sweet and juicy; stone small. A good market sort. Freestone.

Geary's Hold-On. Resembles Smock in many respects, but ripens a few days later. Fruit yellow. Flesh firm and moderately juicy. Freestone.

Lorentz. Bears crops under most adverse conditions. Fruits large, yellow, of very handsome appearance. Flesh yellow through and of superior flavor. Freestone.

Picquet's Late. Succeeds well in many sections of the country. Fruit large, skin yellow, with red cheek. Flesh yellow, sweet and melting. Profitable sort.

STANDARD PEACHES continued

Smock. (Beers.) Fruit medium to large. Skin light orange-yellow, with red cheek. Meat very rich and juicy. Freestone.

Walker's V. Free. A fine white Peach with red blush; above medium size, ripening just before Smock. A remarkable bearer. Tree hardy and a good grower.

Wonderful. A vigorous grower. Large to very large. Skin of rich golden yellow color, overspread with vivid carmine. Flesh yellow, bright red at the pit, which is very small. Of rich, delicious flavor. Freestone.

EIGHTH RIPENING

Ford's Late White. Trees very productive. Fruit large, white and of beautiful appearance. Freestone.

Globe. Trees grow rapidly and bear enormously. Fruit large and globular. Flesh yellow, shaded red toward the pit. Quality is good, very rich and melting. Freestone

Hill's Chile. Trees grow slowly, but is very hardy. Bears large quantities of medium-sized, dull yellow fruits. Freestone.

Holland's Cling. Originated in our town. Fruits above medium size. When fully ripe, it has a red cheek. Flesh white, firm, of remarkably good quality. Excellent for canning. Clingstone.

Hughes I. X. L. Fruit large and of attractive shape. Skin of beautiful yellow color, flesh tender, juicy, and of superior flavor. Good shipping sort.

Klondike. Of large size. Skin white, beautifully colored with red. Flesh white, juicy, and of delicious flavor. Meat solid, but free from fiber. Freestone.

Krummel's October. Without doubt the most profitable late Peach. Unexcelled in size, color and flavor. Ripens fully a week after Salway.

Levy's Late (Henrietta). Fruit large, of round shape. Skin deep yellow, shaded brownish red where exposed to the sun. Flesh deep yellow, firm, sweet and melting. Clingstone.

Marshall. Very productive sort, ripening between Smock and Salway. Fruit large, skin deep yellow. Very profitable shipper.

October Elberta. The best of all late shipping Peaches. Large to very large, oblong in shape. Skin yellow, tinted with

red where the sun strikes it. Flesh yellow, red at the pit. Quality good, a little coarse, but firm and when well ripened it is really delicious. Freestone.

Salway. Extra-large fruits. Skin yellow, mottled with brownish red. Flesh deep yellow, juicy and of rich flavor. Very productive sort. Profitable on mountain land. Freestone.

Sunrise Cling. Fruit of medium size, white and very firm. Supposed to be an improvement on White Heath, which it resembles. It is of superior flavor.

Wheatland. Fruit large. Skin golden yellow, shaded with crimson. Flesh yellow, firm and of excellent quality. A good shipping variety. Freestone.

White Heath Cling. Tree hardy and vigorous. Fruit very large, with greenish white flesh, of exceedingly sweet and luscious flavor. Clingstone.

Wilkin's Cling. A seedling of Heath, producing much larger fruit. Of beautiful blush color. Flesh white, firm and deliciously flavored. Clingstone.

Willett. Trees make a fine, strong growth, and bear freely. Fruit very large, yellow, with dark red cheeks. Flesh yellow, juicy and of rich flavor. Freestone.

NINTH RIPENING

Bilyeu's Late October. Fruit of large size. Skin white, with beautiful blush cheek. Flesh white, firm, and of excellent flavor. This is a favorite late shipping variety and commands highest market prices.

Special Collections. We have in our experimental orchard over one hundred varieties of peaches in fruiting, and we have the opportunity of testing the best ones. For the benefit of our customers not familiar with varieties we will make your selection, and if selection is left to us we will endeavor to give you nothing but profitable sorts. For collection, our selection of peaches, 5 to 6 feet, 15 cts. each, \$1.50 per doz., \$8 per 100, \$70 per 1,000.

APRICOTS

Russian. Hardy and quite distinct fruit trees which will succeed where other Apricots fail. They bear early, producing an abundance of fruit.

Superb. Originated in the Central West, where it has proven to be the hardiest and most productive Apricot in existence. Fruit medium-sized, of light salmon color and most exquisite flavor. 30 cts. each, \$1 for 4.

SALWAY PEACHES

APPLES

No firm in America can offer a better selection of well-grown Apple trees. We have in stock nearly half a million trees in over fifty varieties. Nearly all are budded on French Crab Apple roots, a particularly vigorous and hardy stock.

Apples are easily the most important fruits, and, by a judicious selection of sorts which ripen in succession, a constant supply may be had all the year round. We encourage the planting of orchards, large or small, as, under proper management, they will produce as much income per acre as the average farm crop. The following list contains the choicest new and standard varieties. After each variety name we have given the state or country in which it originated. We shall be glad to aid customers in their selection of proper sorts for different localities and invite correspondence.

Prices of all Two-year-old Apple Trees, except Myrick

Extra, 6 to 7 feet, 30 cts. each, \$3 per doz., \$18 per 100, \$175 per 1,000.

Extra, 5 to 6 feet, 25 cts. each, \$2.50 per doz., \$15 per 100, \$140 per 1,000.

First-class medium, 4 to 5 feet, 20 cts. each, \$2 per doz., \$12 per 100, \$100 per 1,000.

Light grade, 3 to 4 feet, 15 cts. each, \$1.50 per doz., \$8 per 100, \$75 per 1,000.

One-year buds, 4 to 5 feet whips and branches, 20 cts. each, \$2 per doz., \$12 per 100, \$100 per 1,000.

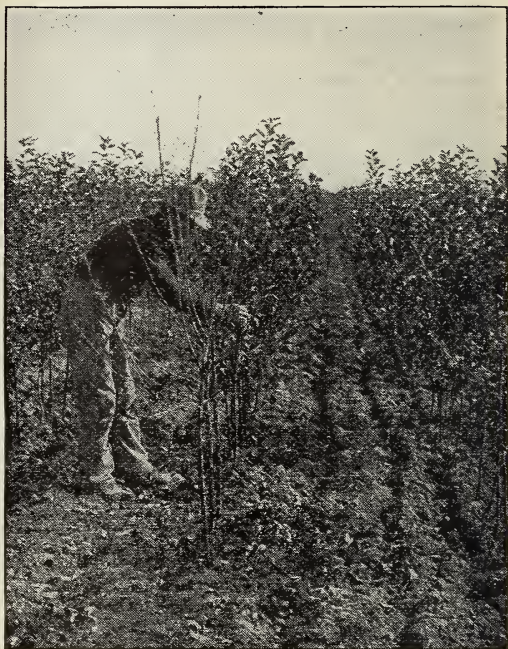

Boxed and baled free at these prices

Summer Apples

Chenango Strawberry. (New York.) Medium early. Of conical shape and medium size. Skin white and red, striped crimson. Flesh white, tender, juicy, and of pleasant subacid flavor. Valuable for family use or market.

Early Harvest. (American sort.) Early. Fruit of medium size, round, oblate. Skin pale yellow. Flesh very white, tender, juicy, subacid flavor. Quality the best. Valuable for dessert or shipping to market.

Early Strawberry. (New York.) Early. Medium in size, round and conical. Striped with deep red. Flesh tender, white-stained, subacid flavor. An excellent cooking Apple. Very prolific.

TWO-YEAR-OLD BUDDED APPLES

SUMMER APPLES, continued

Red Astrachan. (Russia.) Medium early. Fruit round, medium large, greenish yellow, nearly covered with deep crimson. Flesh white, mild, juicy and of decided acid flavor. Quality very good. A good bearing sort. Valuable for all purposes.

Sweet Bough. (American sort.) Early. Fruit large, ovate; skin greenish yellow. Flesh white, tender, sweet and of good, crisp quality. Very prolific bearer. Valuable for home use.

Williams' Early Red. (Massachusetts.) Early. Fruit round, oblong and of medium size. Skin dark red, flesh yellowish white, tender, juicy and of good subacid flavor. Valuable market sort.

Yellow Transparent. (Russia.) Ripens about August 1st. Trees strong and upright, early and abundant bearers. Fruit of medium size, round; skin white at first, turning to pale yellow as the fruit ripens. Flesh tender and juicy, subacid flavor. A most valuable early sort for either home or market use.

MYRICK (American Sort)

One of the most promising Fall Apples we have ever seen. We do not know of any other sort that would approach it from the standpoint of beauty. Prominent pomologists, as J. H. Hale of Connecticut, and Prof. H. H. Hume of Florida, have pronounced this variety one of the most noteworthy and most meritorious novelties that has come to their attention in recent years.

The fruit is in its prime during November and December. It is round, oblate and of good size. The color is a rich waxy yellow, overlaid with splashes of reddish pink. The flesh is of fine texture and very juicy; flavor a rich subacid, of very good quality. This variety should find a place in every home orchard. Its splendid qualities are many and the trees make a surprisingly luxuriant growth. We advise early orders, as only a limited number of trees are available. Two-year trees, 4 to 6 feet, \$2.50 each, \$25 per doz.; 5 to 6 ft., \$2 each, \$20 per doz.

MYRICK APPLE

Fall Apples

Duchess. (Russia.) Medium early. Fruit of medium size, round oblate. Skin yellow, with red stripes. Flesh white, juicy, of sprightly subacid flavor. Trees hardy, vigorous and abundant bearers. A most valuable sort for market as well as for domestic use.

Flora Belle. (Ohio.) September to October. Fruit medium, of round, conical shape. Skin rich golden yellow, with slightly raised russet dots. Flesh yellow, tender, moderately juicy, subacid. Quality very good.

Gravenstein. (Germany.) September to October. Very beautiful sort, with large, yellow and red-striped fruit of large size. Flesh tender, crisp and highly flavored. Valuable for either kitchen or market use.

Kinnard's Choice. (Tennessee.) Medium late. Fruit of medium size, oblate, conical. Skin is yellowish red. Flesh yellow, tender and juicy. Excellent quality.

Maiden's Blush. (New Jersey.) September and October. Of medium size, round, oblate. Skin pale yellow, with beautiful red cheek. Flesh white, tender and of sprightly, pleasant acid flavor. Valuable for all purposes.

Winter Apples

Aiken Red. (Illinois.) Very late. Of medium to large size, with yellowish red skin. Flesh crisp, juicy, and of good subacid flavor. Valuable for either market or home use.

American Golden Russet. (England.) Late. Tree vigorous and great bearer. Fruit round, of medium size. Skin greenish yellow-russet, with a tinge of red where exposed to the sun. Flesh greenish yellow, juicy, subacid, and of best quality. Excellent for cooking purposes.

Baldwin. October to February. One of the best and most popular winter Apples. Tree vigorous and very productive. Fruit large, round; skin deep red. Flesh is white of rich, juicy, subacid flavor. Highly valued on account of its handsome fruit and excellent shipping qualities. Succeeds well in western Maryland, New York, Canada, and in the mountainous region of Virginia, but drops its fruit too early in and near the tide-water district.

Ben Davis. (American sort.) Late. Fruit round, medium to large. Skin yellow, with red stripes. Flesh white, tender, juicy, subacid. Highly valued market variety as it is of strikingly handsome appearance.

Bismarck. (New Zealand.) October to February. Fruit very large, oblate, skin striped green and red. Flesh white, crisp, mild and juicy. Acid flavor. Valuable market sort.

Canada Red. (Canada.) Very late. Trees thrifty, vigorous and hardy. Bears when quite young, giving heavy crops every other year. Fruit of medium size, nearly round, oblate. Skin white, thickly splashed and striped with rich red and crimson. Flesh white, tender, of mild, subacid flavor. One of the best keeping sorts.

Carthouze. (Virginia.) Very late. Also called "Romanite" by some growers. Fruit small to medium, round; skin yellow, with red stripes. Flesh yellow, juicy and melting subacid. A very good sort, valuable for either home use or shipping.

Cooper's Market. (New Jersey.) Very late. Fruit conical, oblate, of medium size. Skin yellow, and red with crimson stripes. Flesh tender, white, of good subacid flavor. A very showy market variety.

Dominie. Late. Fruit of medium size, oblate. Skin green and yellow, with red stripes. Flesh white, tender, juicy and of pleasant subacid flavor. Valuable for all purposes. Keeps exceedingly well.

Gano. (Missouri.) February to May. Large, of perfect shape, with smooth skin. Skin deep red, shaded darker where exposed to sun. Flesh pale yellow, fine-grained, of mild, subacid flavor. A good shipper.

Grimes' Golden. (West Virginia.) Medium late. Fruit round, oblate, of medium size. Skin yellow, flesh yellow, tender, and of rich, subacid flavor. Quality is the best. Valuable for all purposes.

Jonathan. (New York.) Late. Fruit of medium size, round, oblate. Skin yellow, nearly covered with red. Flesh white, stained, very juicy and tender. Of mild subacid flavor. Quality very good. Excellent market sort.

King. (New Jersey.) Late. Fruit large, round to oblong; skin yellow, beautifully striped with red. Flesh yellow, crisp and juicy, of very good subacid flavor. Valuable for home use and market.

Lawver. (Delaware.) November to May. Fruit large, round, oblate and highly colored with dark red. Flesh white, firm, crisp, subacid. Quality is excellent and fruit keeps well.

Lankford. (Maryland.) Very late. Fruit medium large, round, with yellow skin. Flesh of good subacid quality, white, crisp, and very juicy. A fine keeper.

BEN DAVIS APPLE

Longfield. (Russia.) November to March. Fruit medium large, round, of yellow color, with red cheek. Flesh of rich, sprightly flavor, subacid.

Mammoth Black Twig. (Arkansas.) November to April. Fruit large, round, of uniform size. Skin deep red, flesh yellow, crisp and very mild, subacid flavor.

McIntosh Red. (Ontario.) November to February. A very hardy Canadian sort. Fruit round, of medium size. Skin white and yellow, nearly covered with dark red. Flesh white, very tender and juicy; subacid.

Missouri Pippin. (Missouri.) December to April. Fruit medium large, skin yellowish red, with darker red stripes. Flesh of fair quality, white, crisp, subacid.

Nero. (New Jersey.) Late. Fruit of medium size, round to oblong, of yellowish red color. Flesh white, juicy, firm, and of good subacid flavor. Valuable for either home use or market.

Opalescent. December to March. A very handsome new variety. Large to very large. Color of skin light and dark crimson. When polished, the fruits are very shiny. Highly prized for fruit stands and show windows. Flesh yellow, tender and juicy.

Pewaukee. (Wisconsin.) January to June. Fruit medium to large, round, oblate. Skin bright yellow, with red stripes. Flesh white, crisp, and of aromatic subacid flavor. Of very best quality.

WINTER APPLES, continued

Rawle's Janet. (Virginia.) February to June. Trees very vigorous, coming into leaf and bloom later than most varieties. Fruit large, of conical shape. Skin yellow, shaded with red. Highly valued in the South.

Rhode Island Greening. December to April. Fruit large, round and oblate. Skin greenish yellow; flesh yellow, crisp, juicy, of a decided acid flavor. Valuable for all purposes.

Rolfe. (Maine.) Medium late. Fruit of medium size, oblate, striped red. Flesh firm, subacid. Of very good quality.

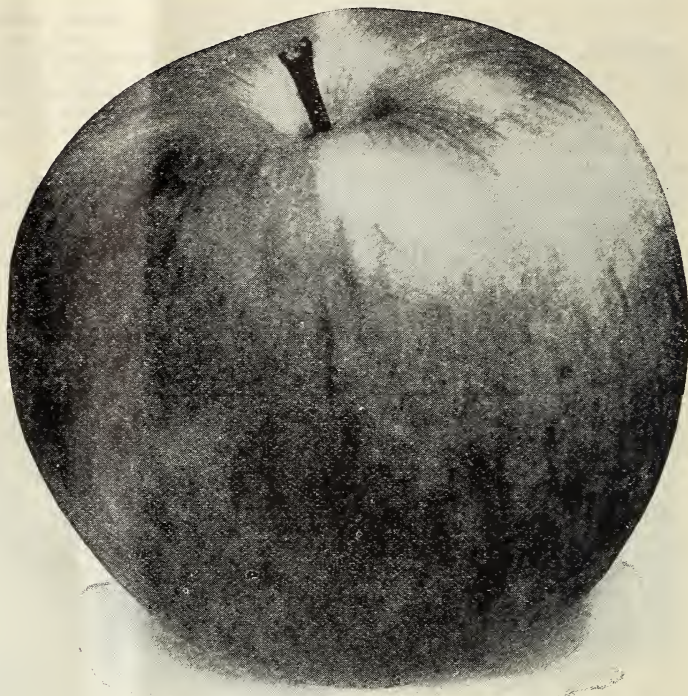

Roman Stem. (New Jersey.) Medium late. Fruit medium, round, skin white and yellow, with russet blush. Flesh tender, juicy and of pleasant subacid flavor. Fine for table use.

Salome. (Illinois.) Keeps well until June. Strong-growing, very hardy sort. Fruit of medium size and uniform shape. Skin pale yellow, with red stripes; flesh yellow, and of tender, juicy quality. Subacid.

Scott's Winter. (Vermont.) Very late. Keeps fresh and crisp until July. Fruit round, of medium size. Heavily striped and almost covered with red. During the winter months it is only useful for cooking. With the approach of spring it mellows and becomes one of the most aromatic dessert Apples in existence.

Stark. (Ohio.) January to May. Fruit large and round; skin greenish yellow, with red stripes. Flesh yellow, crisp, of mild, acid flavor. Esteemed as a long keeper and valuable market variety.

Stayman's Winesap. (Kansas.) Very late. Fruit medium large, oblate. Skin green and yellow, with

NERO APPLE (see page 11)

red stripes. Flesh yellow, firm and of aromatic, mild, subacid flavor. Quality excellent. Illustrated in color on back cover.

Virginia Beauty. (Virginia.) Late. Fruit medium to large, of round shape. Skin greenish yellow, striped with red. Flesh yellow, sweet and juicy. Of very good quality.

Wealthy. (Minnesota.) Medium early. A perfectly hardy and vigorous variety. Fruit round, oblate, of medium size. Skin white, yellow, and red striped with crimson. Flesh white stained, tender and of good quality.

Walbridge. (Illinois.) March to June. Very hardy and very popular in the Northwest. Fruit medium, striped with red. Flesh white, of good, juicy and subacid flavor. Handsome, and of excellent keeping qualities.

Winter Banana. (Indiana.) Late. Fruit large, of golden yellow color, shaded with red. Flesh firm, finely grained, of rich, subacid flavor. A very good keeper and excellent table variety.

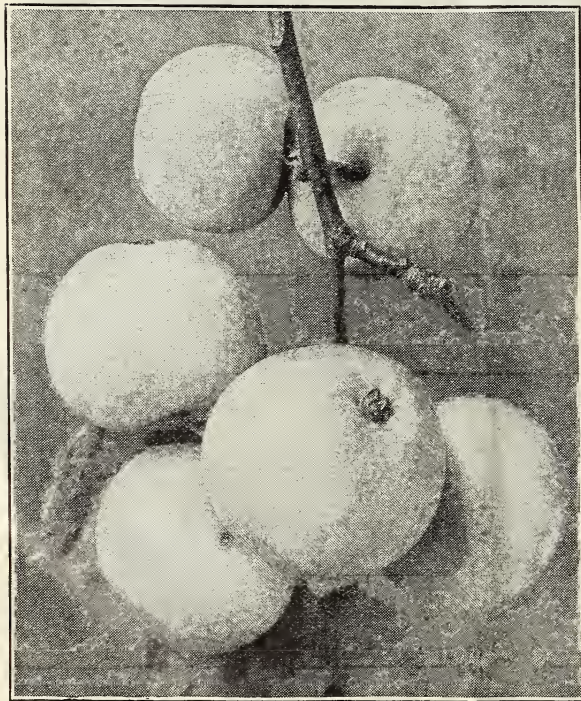

Winter Sweet Paradise. (Pennsylvania.) Very late. Fruit large, round; skin green, with yellow blush. Flesh white, sweet and juicy. Valuable for kitchen use.

Wolf River. (Wisconsin.) Medium late. Fruit very large, round, oblate. Skin light green and yellow, striped with red. Flesh white, tender, and of aromatic subacid flavor. Valuable for home use and market.

Winesap. Late. A great favorite in the West and one of the best cider Apples. Trees bear early; the fruit is of medium size, oblong; skin smooth and of fine dark red color. Flesh yellow, firm, and of elegant flavor.

Yellow Bellflower. (New Jersey.) Medium late. Very large fruit of pale yellow color. Flesh yellow, crisp and juicy. Good all-round sort.

York Imperial. (Pennsylvania.) Medium late. Fruit of medium size, round, oblate; skin greenish yellow, striped with bright red; flesh yellow, crisp and juicy. Quality excellent. Good for home use or market.

YELLOW TRANSPARENT APPLES (see page 10)

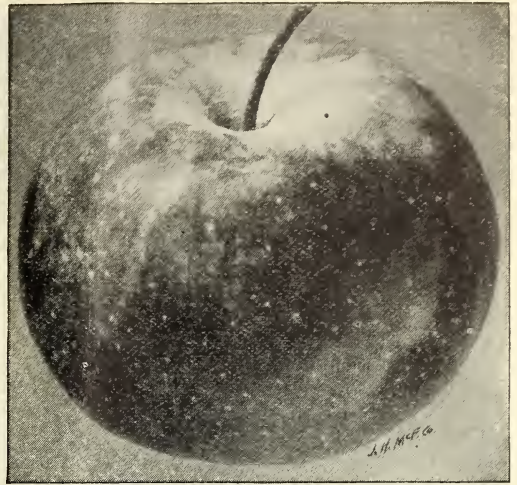

CRAB APPLES

Increased attention is given to these useful and highly ornamental trees, which are particularly noted for their hardiness. They succeed in all kinds of soils in most exposed situations, and bear loads of highly colored fruit year after year. When in bloom, the trees present a charming sight. They are entitled to a place in every garden.

Hyslop. Fruit of good size, and deep crimson color. Flesh yellow, subacid, of good quality. Keeps well into the winter, and is very popular on account of its size, beauty and hardiness.

Transcendent. One of the most valuable sorts. Tree vigorous, growing to a good size, producing immense quantities of very large fruit. Fruits average $1\frac{1}{2}$ to 2 inches in diameter, are excellent for sauce and pies, either in green state or dried. Excellent for cider, as the fruits are very juicy. Skin yellow, striped with red. September to October.

Golden Beauty. Beautiful golden yellow; tree a very strong grower. Fruit of medium size and very good quality. It keeps well and is excellent for dessert, kitchen use or cider.

HYSLOP CRAB APPLE

DWARF APPLES

The increasing demand for low-headed trees, and the lack of space on many fruit farms, has caused us, by the advice of our friends and various entomologists, to start growing Dwarf Apples. We budded 25,000 last season and now have a fine stock of varieties particularly suited for dwarfs. All are very productive, and usually commence bearing the second year after planting. The advantages of planting Dwarf Fruit Trees are many. As they permit of closer planting than standard trees, they will yield as much fruit per acre as those. The fruit is gathered easier, which very much reduces the cost of labor. We have the following varieties of Dwarf Apples on Paradise stocks:

Baldwin
Bismarck
Duchess

Early Harvest
Fallawater
Golden Sweet

Gravenstein
Northern Spy
Red Astrachan

Stayman's Winesap
Sweet Bough
Wealthy

Rhode Island Greening

4 to 5 feet, 20 cts. each, \$2 per doz., \$12 per 100, \$100 per 1,000

GOOD ENOUGH FOR A KING

3-YEAR-OLD KIEFFER PEAR TREE

its best if it is picked about a week before it ripens on the tree.

Koonce. (Illinois.) Vigorously growing sort, bearing large crops annually. An exceedingly early variety, which may be picked green and will color up well in a few days. An excellent shipper.

Lawson. Trees healthy, free from blight, and very productive. Fruit medium to large, very handsome, and of remarkably crisp and juicy flavor. Middle of July.

Manning's (Manning's Elizabeth). Hardy and productive. Fruit small, yellow, with red cheek. Flesh white, juicy and very sweet. Ripens in August.

Rossney. Healthy grower, bears young and is very productive. Fruit of medium size, yellow, with crimson bluish, flesh fine-grained, sweet and melting. An excellent keeper and good shipper.

Seckel. Most exquisitely flavored Pear known. Fruit small, green at first, becoming yellow, with red cheek. Flesh white, melting and of sweet, aromatic flavor. August and September.

Tyson. Vigorous variety; fruit of medium size, bright yellow, with reddish brown cheek. Flavor sweet, melting and aromatic. August.

Wilder. Trees bear well. Fruit small to medium, pale yellow, with red cheek; flesh fine-grained, tender, of rich, subacid flavor. An excellent shipper.

Autumn Pears

Belle Lucrative. Trees grow upright, bear early and abundantly. Fruit large, melting and sweet.

Beurre Clairgeau. An early and abundant bearer. Fruit large, yellow and red. Flesh yellowish, of good quality. October and November.

Flemish Beauty. Fruit large, skin somewhat rough, pale yellow, marbled with reddish brown. Flavor sweet and melting. September and October.

Howell. Early and profusely bearing sort. Fruit large, light yellow, with red cheek. Flavor delicious. September and October.

PEARS

We take great pride in our stock and assortment of these trees. The same care and attention which make our apple and peach trees "trees of quality" are also bestowed upon our Pear trees. We grade them as shown in the illustration given below. All are grown on French whole root, and are dug with full root and fiber which insures good transplanting qualities. •

The growing of Pears cannot be urged too strongly. They thrive in a great variety of soils and the fruit by far surpasses the apple in rich, juicy flavor. By a judicious selection of sorts, ripening in succession, Pears may be had from July until March or April of the following year. In order to preserve the best flavor, the fruit should be picked green and ripened in the house.

Price of Pears

	Each	Doz.	100
First class, extra, 6 to 7 ft.....	\$0 35	\$3 50	\$25 00
First class, 5 to 6 feet.....	25	3 00	20 00
First class, 4 to 5 ft.	20	2 00	15 00

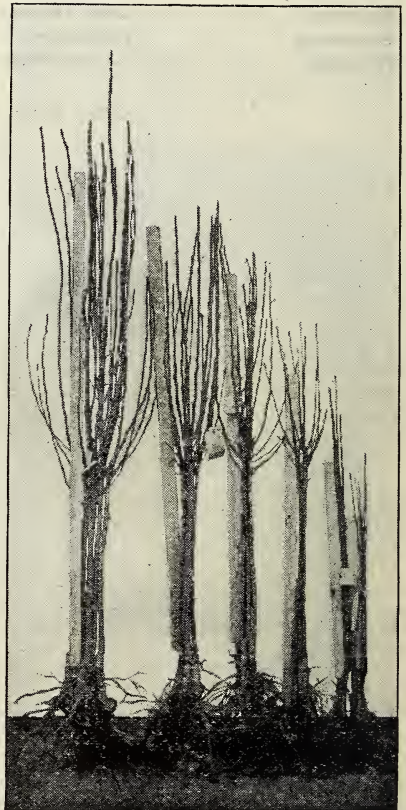

Bartlett's and **Seckel**, 5 cts. each additional to above price.

Boxed and baled free at these prices

Summer Pears

Bartlett. The most popular sort, both for home use and market. Trees bear early, producing enormous crops of large, handsome fruit. The flavor is delicious, very rich and juicy. One of the finest eating Pears, and extra fine for canning. Should be picked before it is fully ripe.

Clapp's Favorite. Splendid grower, hardy and productive. Fruit large, handsome, marbled with dull red where exposed to the sun. The flesh is fine-grained, juicy, melting and of rich sweet flavor. The fruit is at

THE DIFFERENT GRADES OF OUR PEAR TREES

AUTUMN PEARS, continued

Louise Bonne de Jersey. Vigorous and productive. Fruit greenish yellow, bright red cheek. September.

Le Conte. Vigorous and prolific sort. Fruit large, with smooth yellow skin; flesh juicy and firm. Good shipper.

Sheldon. Fruit medium size, yellow, with red cheek. Flavor rich, vinous, highly aromatic. October.

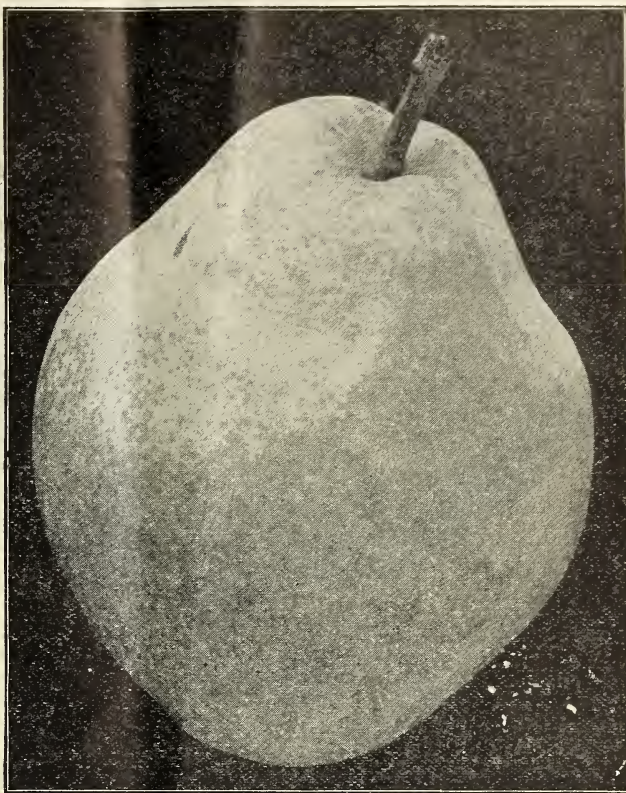

Vermont Beauty. Fruit round, of medium size; skin yellow, nearly covered with carmine-pink; flesh melting and of rich, sprightly flavor. October.

Worden Seckel. Improved Seckel, with larger fruit of better appearance and keeping qualities. Fruit borne in clusters, of flavor equal to that of the original Seckel. Ripens in October and keeps well until December.

Winter Pears

Kieffer.

The leading variety in our assortment. We have a very extensive orchard of this sort and cut our grafting wood and buds from same, selecting the very best trees to propagate from. In this manner we have raised the standard of the Kieffer Pear until our strain has become the very best on the market. The fruit is large to very large, skin yellow, with light vermilion cheek. Flesh brittle, very juicy and of pronounced musky aroma. One of the best market varieties, and an excellent keeper. This superb variety is often underestimated because large quantities of it are shipped to market in immature condition and before the fruit has attained proper size. However there are few Pears that are more attractive than the Kieffer, if it is allowed to hang on the tree until the beginning of October and is then carefully ripened in a cool, dark room. If handled in this manner, the quality of the flesh is the best, exceedingly juicy and of sprightly sub-acid flavor. Kieffer Pears are being planted more and more by the largest commercial fruit growers of the country and this fact is sufficient proof that the merits of this excellent sort are more and more recognized. The trees are apt to set too much fruit, and, in order to obtain choicest fruit of large size, it should be thinned early in the season. For best results, one-tenth of a Kieffer Pear orchard should be planted with Le Conte Pears, as this is the best pollinizer.

Boxed and baled free at these prices

Barseckel. A cross between Bartlett and Seckel. The trees are vigorous, upright growers. Fruit large, a little smaller than Bartlett, ripening later. Skin pale green; flesh fine-grained, white, melting and juicy. The quality is the best.

Duchess (Duchesse d'Angouleme). A general favorite, of large size and fine appearance. Skin dull, greenish yellow. Flesh white, very juicy, and of excellent flavor.

Garber. Trees free from blight and immensely productive. Fruit large, resembling Kieffer Pears, but ripening two or three weeks earlier. October to December.

Lawrence. Trees hardy, healthy and very productive. Fruit large, skin yellow, covered with brown spots. Flesh whitish, of rich, buttery quality and aromatic flavor. One of the best of the early winter Pears.

DWARF PEARS

For low-headed trees, convenience, and to have fruit in two or three years after planting, the Dwarf Pears have their place in gardens as well as in commercial orchards.

The leading varieties are **Duchess, Bartlett, Clapp's Favorite, Seckel and Flemish Beauty.**

Trees 4 to 5 ft., 15 cts. each, \$1.50 per doz., \$12 per 100.

Trees 3 to 4 ft., 10 cts. each, \$1 per doz., \$10 per 100.

DIGGING 2-YEAR-OLD KIEFFER PEARS

CHERRIES

The great crops of sweet, luscious fruit which these trees bear year after year make them most popular. Although they grow best in light, sandy or gravelly soils, they will do well in any ground that is put in good condition.

Cherries are divided into four groups. Heart, Bigarreau, Duke and Morello. The first two classes are also called Oxheart Cherries. They grow rapidly into large, pyramidal trees which bear heavy crops. Duke and Morello Cherries grow slowly, make smaller trees, and bear large crops of **sour** fruit.

EARLY RICHMOND CHERRIES

Prices of Cherry Trees

	Each	Doz.	100	1,000
Extra, 5 to 7 feet	\$o 40	\$4 00	\$30 00	\$250 00

First-class, 3 to 4 feet	25	2 50	15 00	100 00

Heart and Bigarreau (Sweet)

Black Tartarian. Produces immense crops of large purplish black fruits of rich, juicy flavor. Last of June.

Governor Wood. Tree healthy and productive. Fruit large, light red, and of rich, delicious flavor. June.

Napoleon. Of largest size, pale yellow, with red blush. Flesh sweet, firm and juicy. One of the most satisfactory market sorts. July.

Rockport. Beautiful, erect trees. Large, amber-yellow fruit, sweet, tender flavor. June.

Windsor. Trees hardy and prolific. Fruit large, liver-colored, firm, and of fine quality. Hangs well on the tree and is not subject to rot. Valuable for late market or home use. July.

Yellow Spanish. Very large, often 1 inch in diameter. Skin pale yellow, with light red cheek next to the sun. Flesh firm, of rich, delicious flavor. A general favorite. June.

Duke and Morello (Sour)

Baldwin. A most profitable variety, noted for its hardiness, vigor, earliness, remarkable productiveness, and the superior quality of its fruit. Very large, almost round, of dark red color. Flavor slightly subacid; the sweetest and richest of this class. Does particularly well in the western section of this country. June.

Dye House. Very productive sort, ripening a week before Early Richmond. Fruit medium, with a bright red skin; flesh soft, juicy and tender, of rather sprightly subacid flavor. One of the earliest market varieties. June.

Early Richmond (Kentish Virginia; May). Exceedingly prolific sort, unsurpassed for cooking purposes. Fruit of medium size, dark red; meat melting, juicy, and of sprightly acid flavor. June.

English Morello. Remarkably productive sort, ripening at the end of the Cherry season. Fruit large, dark purplish. Meat very juicy and of rich, acid flavor. First of August.

Late Duke. Large, light red. Last of July.

Duke and Morello (Sour), continued

Louis Philippe. Very productive. Fruit large, round, of purplish black-red color. Flesh tender, of mild acid flavor. Middle of July.

May Duke. Superior and prolific sort, with large, dark red, very juicy fruit. June.

Montmorency. Trees vigorous and productive. Fruit large, light red, very handsome. Last of June.

Olivet. Large, globular, of shiny, deep red color. Flesh red, tender, of rich, subacid flavor. June.

Ostheim (Russian). Valuable extra-hardy sort. Fruit nearly black when ripe; flesh red, tender, subacid. Unsurpassed for market. June.

Reine Hortense. Fruit very large, bright red, juicy and delicious. The sweetest of this class. July.

Wragg. Resembles English Morello in every respect, but trees are said to be much hardier. July.

Sour Cherries. Our choices of varieties, 4 to 5 ft., 25 cts. each, \$2.50 per doz., \$17.50 per 100 and \$125 per 1,000.

BALDWIN CHERRIES

PLUMS

Plums give best results in rich, clayey soils, but will also succeed in rich, sandy ground. Where good cultivation is given, they may be planted as close as 10 feet apart, and will yield surprisingly large crops. Head the tops as low as possible, as this will encourage the forming of low crowns.

Prices of Plums on Plum Roots

First-class, XXX, 6 to 7 ft., 35 cts. each, \$3.50 per doz., \$25 per 100.
First-class, XX, 5 to 6 ft., 30 cts. each, \$3 per doz., \$20 per 100.
Heavy, first-class, 4 to 5 ft., 25 cts. each, \$2.50 per doz., \$15 per 100.
Medium, 3 to 4 ft., 20 cts. each, \$2 per doz., \$10 per 100.
Light, 2 to 3 ft., 20 cts. each, \$1.50 per doz., \$8 per 100.

Abundance. Large, showy fruits of beautiful amber color, turning to rich, bright cherry. Flesh light yellow, very tender and juicy, and highly perfumed. July.

Burbank. Large, nearly globular fruit of deep cherry-red. Flesh deep yellow, very sweet and of a peculiar aromatic flavor. August.

Bradshaw. Fruit very large. Skin dark violet-red, flesh yellowish green, juicy and sweet. August 15.

Chabot. Fruit large, skin yellow, nearly covered with carmine. Flesh very solid, orange-yellow, and of good subacid quality. Clingstone. First of September.

October Purple. Large fruit, of uniform size. Skin dark, rich maroon; flesh firm, of excellent flavor; stone small. A particularly fine sort

Ogon. Tree vigorous and hardy, bearing large, roundish fruit in liberal quantities. Skin of fruit

BLOCK OF TWO-YEAR-OLD WICKSON PLUM TREES

golden yellow, flesh solid, of rich, sweet flavor. Free-stone. Late June.

Red June. Hardy, upright-growing trees, which are very productive. Fruit medium to large, of very showy, deep vermilion-red color. Flesh light yellow, of good subacid flavor. The best of the early sorts. August.

Satsuma. Large, of globular shape with sharp point. Skin purplish red, flesh dark red, firm, and of excellent flavor. Pit very small. September.

Shropshire Damson. Fruit very large, dark purple. Highly esteemed for preserving. September.

Wickson. One of the most productive Japanese varieties originated by Luther Burbank. Fruit largest of this class, of deep maroon color. Flesh dull yellow, firm and of good quality. A good keeper and fine shipper.

QUINCES

3 to 5 feet, 40 cts. each, \$4 per doz., \$30 per 100

Apple, or Orange. Very productive sort. Fruit large, round, bright golden yellow. Cooks very tender and is valuable for preserves or flavoring. The most popular variety. October.

Bourgeat. Remarkably thrifty sort, yielding immense crops. Fruit large, round, of golden yellow color. Keeps in good condition until February.

MISSOURI MAMMOTH QUINCE

Champion. Vigorous and prolific variety. Fruits large, of oval shape, quality excellent. Begins to bear when two years old. Keeps well until January.

Meech. An immensely productive, vigorously growing sort. Fruit large, orange-yellow, of great beauty and delightful fragrance. Fine for preserving.

Missouri Mammoth. The largest variety in cultivation. Fruit of perfect shape and mammoth size.

CURRANTS

Strong, 2-year-old-plants of the following varieties, 15 cts. each, \$1.50 per doz., \$6 per 100

Fay's Prolific. Best of all the red Currants. A great bearer, with long stems. Subacid.

Lee's Prolific. Black; fruit large and of superior quality. Enormously productive.

North Star. Hardy, vigorous, and very prolific. Bunches average 4 inches in length. Quality unexcelled.

Pomona. Bright red; of good size, with few seeds. Very sweet, hanging long after ripening

Red Dutch. Excellent old sort of well-known quality. Large clusters of slight acid flavor.

Victoria. Very late red. Fruit large, long, of fine quality.

White Grape. Yellowish white. Very large and of excellent, mild quality. The best of the white sorts.

Wilder. Bright red; very large bunches.

KING GRAPES

GRAPES (Two-year-old Vines)

Grape-vines will bear fruit under the most unfavorable conditions, and should be considered a necessary adjunct to every place, large or small, city or country. While the best and cheapest way to grow them is on especially constructed trellis, they may be raised successfully on the side of a building or on garden fences

BLACK GRAPES

Campbell's Early. Strong, hardy and vigorous. Both clusters and berries are of good size, of dark, glossy black color. Pulp sweet and juicy, parting readily from the small seeds. Middle of August. 25 cts. each.

Concord. Early and most popular sort on the market. Large, compact bunches, with large berries. Skin tender, but firm; flesh juicy, sweet and delicious. 10 cts. each, 75 cts. per doz., \$3 per 100, \$25 per 1,000.

King. Of the same color as Concord, but vines are more prolific, clusters and berries much larger. Pulp exceedingly tender, of delightfully sprightly flavor, with few seeds. Awarded highest prizes wherever shown. 50 cts. each, \$5 per doz.

Moore's Early. Ripens before Concord. Bunches medium, berries large; flesh pulpy, of medium quality.

Planted extensively as a market sort. 10 cts. each, 75 cts. per doz., \$3 per 100, \$25 per 1,000.

RED GRAPES

Agawam. (Rogers' Hybrid No. 15.) Red or maroon. Loose bunches, with large berries. Skin thick, pulp rich and juicy, of a peculiar aromatic flavor. It ripens with Concord and keeps well. 10 cts. each, 75 cts. per doz., \$4 per 100.

Delaware. Red. Small, compact bunches, with small berries. Skin thin, but firm; flesh sweet and refreshing. Of best quality for either table or wine. 10 cts. each, 75 cts. per doz., \$4 per 100.

Wyoming. Bright red, almost amber. Berries of large size, tender, juicy, with sweet aroma. Ripens early. 10 cts. each, 75 cts. per doz., \$4 per 100.

WHITE GRAPES

Niagara. The leading white market variety. Bunch and berry large, greenish white, changing to pale yellow when fully ripe. Quality excellent. August. 10 cts. each, 75 cts. per doz., \$4 per 100, \$35 per 1,000.

Pocklington. Pale green, tinted yellow where exposed to the sun. Large, compact bunches and large berries. 10 cts. each, 75 cts. per doz., \$4 per 100.

Special Collection, our choice. 12 vines, six sorts, for \$1, \$3 per 100, \$25 per 1,000

MULBERRIES

Russian. Grows rapidly, bearing large, long fruits of good flavor, from June until September. Its leaves are larger than those of the other varieties. Our stock of these trees is particularly choice. 6 to 8 feet, 50c. each, \$5 per doz., \$40 per 100.

RASPBERRIES

Ruby. Ripens with the earliest, and continues through a long season. Fruit large bright red, exceedingly firm, excellent quality. Strong grower, with large, hardy canes. At Marlboro the most profitable early commercial sort among the bright reds; worthy of trial everywhere. 10 cts. each, \$1 per doz., \$3 per 100.

ASPARAGUS

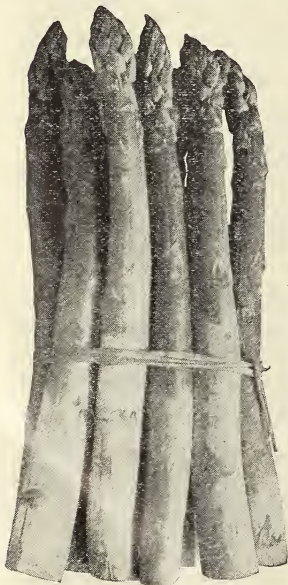

Two-year-old roots, extra strong, by mail, 40 cts. per doz.; by express, 75 cts. per 100, \$5 per 1,000

Giant Argenteuil. Has been grown several years by some of the most successful truckers near Charleston, S. C., and has been pronounced superior to any other sort in earliness, productiveness and large size of stalks.

Barr's Mammoth. Early and very large. Most popular market sort.

Conover's Colossal. Grows very rapidly, producing stalks of enormous size.

Palmetto. Early; very large and productive. A variety of very best quality.

ASPARAGUS

Ornamental Department

The value of properly planted and cared-for ornamental trees and shrubs is being more and more recognized, as it adds considerably to the beauty and attractiveness of the surroundings. Increased attention is therefore given by us to this department of our business. The same high standard of quality which distinguishes our fruit trees from others will be found in our ornamentals. They are propagated by the most approved methods and selected with the best of care.

While abroad the past summer, our Mr. Orlando Harrison visited the leading nursery districts of Europe and bought for us many selected lots of ornamentals. These, and stock grown by us in past year, put at the disposal of our customers a fine stock of first-class trees, shrubs and herbaceous plants.

EVERGREENS

These graceful, stately plants have always been favorites with us. They lend a touch of color to the landscape in winter time, and always please the eye with their handsome foliage.

Abies concolor. WHITE FIR. One of the finest Rocky mountain evergreens. A very graceful and rapid grower, with broad, handsome foliage. Leaves bluish green above, silvery green beneath. In time it forms a most handsome tree of majestic appearance. 10 inches. 50 cts. each.

Juniperus communis. COMMON JUNIPER. A handsome shrub, with low-spreading branches and very dense, grayish green foliage. Grown in connection with taller evergreens, it gives those trees that effective setting which is so desirable in landscape work. 18 to 24 inches. 50 cts. each.

J. Virginiana glauca. BLUE CEDAR. The trees make very handsome and effective specimens. They grow vigorously, are of compact habit, and their rich, silvery blue foliage is very distinct and beautiful. 3 to 4 feet. 75 cts. each, \$7.50 per doz.

J. nana. DWARF, or PROSTRATE JUNIPER. Very dwarf, low-growing shrub, with dense, grayish green foliage. It thrives well anywhere, either in the shade or in sunny, exposed situations. One of the best for formation of rockeries. 60 cts. each.

Picea excelsa. NORWAY SPRUCE. Very hardy and handsome variety of very rapid growth. It is adapted to a great variety of soils, and is planted extensively for hedges and windbreaks. A splendid specimen hedge is illustrated on page 1. 12 to 15 inches, 25 cts. each, \$2.50 per doz.; \$7 per 100; 15 to 18 inches, 30 cts. each, \$3 per doz.; \$9 per 100; 1 1/2 to 2 feet, 40 cts. each, \$4 per doz.; \$13 per 100; 2 to 3 feet, 50 cts. each, \$5 per doz.; \$40 per 100; 3 to 4 feet, 75 cts. each, \$7.50 per doz.

P. pungens. COLORADO BLUE SPRUCE. A hardy and most beautiful tree from the Rocky mountains. It is branched regularly, of very symmetrical growth, with splendid bluish or sage-colored foliage. 12 inches, \$1; 3 feet, \$3.

KOSTER'S BLUE SPRUCE (see page 20)

EVERGREENS, continued

STANDARD BAY TREE

24 inches, 30 cts. each, \$3 per doz., \$13 per 100; 2 to 3 feet, 40 cts. each, \$4 per doz., \$25 per 100; 3 to 4 feet, 60 cts. each, \$6 per doz., \$40 per 100.

Thuya occidentalis filicoides. FERN-LIKE ARBORVITÆ. Small sort of pleasing, pyramidal shape. Foliage fern-like; dark green; very beautiful. 2 to 3 feet, 75 cts. each, 3 to 4 feet; \$1 each.

T. occidentalis globosa. GLOBULAR ARBORVITÆ. Forms dense, compact plants with globular outline. Foliage light green. Highly ornamental. 2 to 3 feet, 75 cts. each; 3 to 4 feet, \$1 each.

T. Hoveyi. HOVEY'S GOLDEN ARBORVITÆ. Distinct sort, with golden green foliage. Bushes very dense; of distinct conical shape. 2 to 3 feet, 75 cts.

T. occidentalis plicata. SIBERIAN ARBORVITÆ. Very hardy sort of distinct, pyramidal growth. Foliage very dense, greenish brown, lower branches bluish green. Keeps color well in winter time; forms elegant specimen trees on lawns. 3 feet, 75 cts. each.

T. occidentalis pyramidalis. PYRAMIDAL ARBORVITÆ. Of upright, compact habit, with dense, bright green foliage. It is the narrowest of the Arborvitæ, very formal and attractive. 3 to 4 feet, \$1 each.

Tsuga Canadensis. CANADIAN HEMLOCK SPRUCE. If not disturbed, it grows to tall, graceful trees, with drooping branches. When trimmed, it forms dense shelters, hedges or specimen trees. Highly valued for parks or landscape work. Foliage dark green and glossy 2 to 3 feet, 75 cts. each; 3 to 4 feet, \$1 each.

Cupressus, Glory of Boskoop. LAWSON'S CYPRESS. One of the most beautiful evergreens. Trees slender, growing very tall. Foliage feathery, fern-like, of deep, bluish green color, fully as rich as that of the Colorado Blue Spruce. Quite hardy. 12 to 18 inches, 75 cts. each

BROAD-LEAVED EVERGREENS

BAY TREES. Most valuable ornamental trees, usually trimmed to formal lines. They are particularly useful as tub plants for the decoration of halls, vestibules, conservatories, etc. Not hardy in northern states. We imported a choice lot of trees from Europe the past summer. **Standard trees**, with nice crowns, 40- to 48-inch stems, 28- to 30-inch crown, \$8 each, \$15 for 2.

LAURUS CERASUS. CHERRY LAUREL. The Mock Orange of the South. Handsome, bushy trees with glossy, evergreen foliage. They make very ornamental tub plants, bearing white flowers, which somewhat resemble those of the cherry tree. **Standard trees**, with symmetrical crowns, 3 to 4 feet, \$2.50 each, \$4.50 per pair. **Dwarf Pyramids**, 2 to 3 feet, 50 cts. each, \$5 per doz.

DECIDUOUS TREES

Acer Colchicum rubrum. RED COLCHICUM MAPLE. Symmetrical tree with spreading branches. Leaves five- to seven-lobed, of dark blood-red color, when unfolding. Of rather slow growth. Never attains a very large size. Highly valued on account of the unique color of its foliage. 4 to 5 feet, 75 cts. each, \$7.50 per doz.

A. negundo. BOX ELDER, or ASH-LEAVED MAPLE. Trees grow rapidly into large specimens. Branches spreading, leaves bright green, turning yellow in the fall. Endures drought and cold to a remarkable degree. Frequently found in the West, where it is planted for windbreaks, shelters and on timber claims. 8 to 10 feet, 50 cts. each, \$5 per doz., \$30 per 100.

NORWAY MAPLE (see page 21)

DECIDUOUS TREES, continued

Acer platanoides Schwedleri. RED, or PURPLE MAPLE. The beautiful foliage of this variety attracts attention at all seasons. In the spring, the leaves are gleaming red and purple, turning to purplish green in summer. In the fall, they fade to many shades of yellow, red and brown. 5 to 6 feet, 75 cts. each, \$7.50 per doz.

A. platanoides. NORWAY MAPLE. A splendid street tree and general favorite for lawns, parks, or landscape work. Of compact, vigorous growth, with strong branches and smooth, bright green foliage. We have a fine stock of this splendid variety. 5 to 6 feet, 50 cts. each, \$5 per doz., \$40 per 100; 6 to 8 feet, 60 cts. each, \$6 per doz., \$50 per 100; 8 to 10 feet, 80 cts. each, \$8 per doz., \$60 per 100; 10 feet, \$1 each.

A. saccharinum. SILVER MAPLE. One of the finest and most useful of all shade trees. Grows to large size. Branches spreading; leaves deeply lobed; bright green above, and silvery white underneath. 6 to 8 feet, 40 cts. each, \$4 per doz., \$25 per 100; 8 to 10 feet, 50 cts. each, \$5 per doz., \$35 per 100; 10 to 12 feet, 75 cts. each, \$7.50 per doz., \$50 per 100.

Æsculus hippocastanum. EUROPEAN HORSE-CHESTNUT. One of the most popular shade and street trees, with handsome, dark green foliage and showy, upright spikes of white and red flowers, which are produced in May. Fruit is prickly, enclosing two or three attractive seeds. 4 to 5 feet, 50 cts. each, \$5 per doz., \$35 per 100.

Betula alba pendula laciniata. CUT-LEAVED WEEPING BIRCH. A very popular tree, with many attractive characteristics. It grows quite tall, is of slender but vigorous growth. The branches are drooping, have silvery white bark and delicately lacinated foliage. A superb variety. 6 to 8 feet, \$1 each; 10 to 12 feet, \$2 each.

Catalpa speciosa. INDIAN BEAN. Medium-sized tree, noted for its great hardiness. The foliage is heart-shaped, of yellowish green color. The large, showy flowers are produced in June, being followed by long, narrow "beans" in late summer. Very effective. 5 to 6 feet, 25 cts. each, \$2.50 per doz., \$20 per 100; 6 to 8 feet, 40 cts. each, \$4 per doz., \$30 per 100; 8 to 10 feet, 60 cts. each, \$6 per doz., \$40 per 100.

Fraxinus nigra, AMERICAN BLACK ASH. Slender, upright trees, with compact, narrow crown. Foliage grows in leaflets from eight to ten, is dark green, paler green underneath. 6 to 8 feet, 50 cts. each, \$5 per doz., 8 to 10 feet, 60 cts. each, \$6 per doz.

Magnolia Soulangeana. Noted for its wealth of large, showy flowers which appear before the foliage in earliest spring. The very fragrant flowers are cup-shaped, white, suffused with pink. The dark green leaves do not expand until after the flowers have fallen. This tree combines extraordinary hardiness with great beauty. 3 feet, \$1 each, \$10 per doz., \$90 per 100.

M. stellata Halleana. HALL'S JAPAN MAGNOLIA. Hardy, thriving in most any soil. Blooms earlier than any other variety, producing its pure white, semi-double, fragrant flowers in April. 2 to 2½ feet, \$1.75 each.

Populus Carolinensis. CAROLINA POPLAR. A widely planted, very popular, native tree. It grows rapidly, forming symmetrical, pyramidal heads. Large, glossy leaves. Particularly valuable for park or street planting. For years this has been one of our biggest sellers in the ornamental department, and we are equipped better than ever before to take care of large orders. 5 to 6 feet, 25 cts. each, \$2.50 per doz., \$15 per 100; 6 to 8 feet, 35 cts. each, \$3.50 per doz., \$18 per 100; 8 to 10 feet, 50 cts. each, \$4 per doz., \$20 per 100; 10 to 12 feet, 50 cts. each, \$5 per doz., \$25 per 100.

Tilia Americana. AMERICAN LINDEN, or BASSWOOD. One of the best ornamental trees. It is hardy, grows rapidly; the leaves are oval or heart-shaped, dark green above, pale green underneath. A grand tree, either for lawns, parks or streets. 5 to 6 feet, 60 cts. each, \$5 per doz., \$40 per 100; 6 to 8 feet, 75 cts. each, \$7.50 per doz., \$50 per 100.

Ulmus Americana. AMERICAN ELM. Tall, stately tree of graceful habit and beautiful outline. It is very hardy and grows rapidly, becoming very picturesque when old. One of the most satisfactory trees for landscape work. 6 to 8 feet, 60c. each, \$6 per doz., \$15 per 100; 8 to 10 feet, 75c. each, \$7.50 per doz., \$50 per 100.

SILVER MAPLE

CAROLINA POPLAR

RHODODENDRONS

EVERGREEN SHRUBS

Rhododendrons (ROSEBAY)

Few plants can compare with these magnificent shrubs, the flowers of which rival those of the Magnolia in size and beauty. They are most effective when planted in large beds or groups. But they are equally desirable planted singly in the lawn or grouped around evergreens, which will afford most advantageous shelter. The lovely blossoms delight the eye with their unsurpassed splendor.

Catawbiense grandiflora, White. Flowers are very large, borne freely in large clusters late in the spring. Foliage oblong, bright green, clustered at the end of the branches. Ten to fifteen buds, 15 inches, \$1 each, \$10 per doz.

C. grandiflora, Purple. Resembles the preceding. The flowers are purple. Seven to ten buds, 12 inches, \$1 each, \$10 per doz.

Ponticum, Purple. Not quite so hardy as the two preceding sorts, but the bushes are very vigorous, growing as high as 10 feet. Purple flowers. Ten to fifteen buds, 15 inches, \$1 each, \$10 per doz.

DECIDUOUS SHRUBS

Azalea mollis. JAPANESE AZALEA. Blooms before the Rhododendrons. It thrives in any good soil either in full sun or partial shade. While quite hardy, protection should be given in exposed situation. Our seedlings embrace a great variety of colors. Fifteen to twenty-five buds, 12 inches, 50 cts. each, \$5 per doz.

Hydrangea paniculata grandiflora. Very large showy flowers are borne in panicles or clusters. They are white at first, changing to pink, brown, and, finally, to bronzy green as the season advances. In order to produce largest clusters, the shrubs should be pruned severely every spring. They show to best advantage planted in beds or masses, but can also be grown in tree form. 18 to 24 inches, 25 cts. each, \$2 per doz., \$15 per 100.

LIGUSTRUM OVALIFOLIUM (California Privet). Decidedly the most popular hedge plant, forming beautiful, symmetrical, live fences of great density. We have grown Privet for a good many years, have grown millions of Plants, and the longer we grow it the better we like it. Untrimmed, it grows from 8 to 12 feet high; it has attractive, glossy dark green foliage, which is not subject to insect attacks. It will stand pruning to any extent at all seasons. With us it is almost evergreen, holding its old foliage until the new leaves appear. Pull down that old, expensive, wood fence and ornament your grounds with Privet hedge.

To Plant California Privet, thoroughly work a strip of soil about 5 feet wide. Plow or dig a trench through the middle of this strip, set your plants 6 to 9 inches apart in the trench and fill in the soil about the roots, thoroughly pulverizing it. Dipping the roots of each plant in a mud puddle before setting, will prove very beneficial.

Viburnum plicatum. JAPANESE SNOWBALL. This handsome, hardy shrub has exceedingly showy flowers and beautiful foliage. The pretty, pure white flowers are borne in globular clusters. 4 to 5 feet, 50 cts. each.

DIGGING CALIFORNIA PRIVET IN ONE OF OUR NURSERIES. NOTICE SPLENDID FIBROUS ROOTS

ROSES

Strong field-grown plants, 30 cts., each, \$3 per doz., \$20 per 100

Baby Rambler. Unique variety, forming compact bushes about 2 feet high, which are covered completely with large clusters of crimson flowers. One of the best for borders and bedding

La France. Hybrid Tea. A universal favorite on account of its free-blooming qualities and delicate coloring. The flowers are of good size, very double and of perfect shape. They are of delicate silvery rose color, shaded with cerise-pink. One of the most fragrant roses in cultivation.

Magna Charta. Hybrid Perpetual. A splendid sort, with extra-large, double flowers of pleasing fragrance. Color a clear, bright rosy red, flushed with violet-crimson. It is a sure and free bloomer. Highly esteemed as one of the hardiest Roses; largely used for general planting.

Rosa rugosa. WRINKLED JAPANESE ROSE. This wild species of Roses thrives in a wide range of soils, under almost any condition. The flowers are very showy, 3 or more inches across, and are produced in such profusion that they completely cover the shrub. After the blooming period, a wealth of large, scarlet berries develop, which give to the plants a beautiful and most effective appearance **White and Red.**

Climbing Roses

Crimson Rambler. CLIMBING POLYANTHA. Has attained world-wide popularity. It succeeds everywhere, producing large trusses of glowing crimson flowers year after year. Although it is preëminently a Climbing Rose, it may also be grown in bush or pillar form.

Pink Rambler. Resembles the preceding sort in every respect, but the color of the wonderfully large trusses is a brilliant light pink.

White Rambler. Of similar habit of growth as the Crimson Rambler, just as hardy and with flowers just as large. The pearly white clusters contrast nicely with those of the other Rambler Roses.

Yellow Rambler. The hardiest of all yellow climbing Roses. The medium-sized flowers are borne in immense clusters. Of bright yellow color and very sweet-scented.

Clematis

Of the many vines that are used for the decoration of porches, balconies, arbors, trellises, etc., none are more graceful and showy than the various types of Clematis. Their wealth of large, velvety flowers make them objects of admiration at all times. The vines should be tied and trained against support.

2- to 3-year-old, field-grown plants, 50c. each, \$5 per doz.

Alba. White. Robust, free-flowering variety.

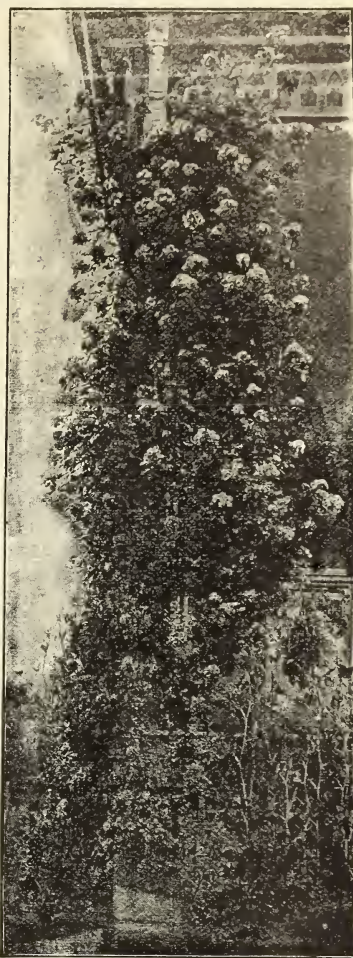

Gypsy Queen. Dark purple; very effective.

Jackmani. When fully expanded, the flowers measure 4 to 6 inches across. They are of most intense velvety, violet-purple. Blooms

continually from July until late in the fall.

PAEONIA FESTIVA MAXIMA

CRIMSON RAMBLER ROSES

Hardy Herbaceous Peonies

These most magnificent flowers are receiving wide recognition and their many fine qualities give them increasing popularity every year. Those who have in mind the old-fashioned "Piney" of grandmother's garden will not recognize the truly superb new varieties as belonging to the same class of plants. Peonies are absolutely hardy. They thrive in any good garden soil, are free from insect pests and disease and have very attractive foliage which forms a pleasing contrast with the lovely blooms.

Queen Victoria. Outer petals white, center rosy white. Strong grower and free bloomer. Valued by florists as a cut-flower. 50 cts. each.

Festiva maxima. One of the best all-round whites. Flowers of magnificent form are borne on long, stiff stems. Center petals tipped with carmine. 50 cts. each.

Officinalis alba fl. pl. Large double white., 50c. ea.

Officinalis rosea fl. pl. Double, clear pink. 35 cts. each, \$2.50 per doz., \$16 per 100.

Officinalis rubra fl. pl. Rich, deep crimson. Very early; one of the brightest of the dark-colored sorts. 25 cts. each, \$2.50 per doz.

NOTE.—We have in stock a complete assortment of Hardy Herbaceous Plants, Summer-flowering Bulbs, Ornamental Grasses and Bedding Plants. We invite interested planters to ask for full list of varieties.

Collections

SET 21.—11 Gooseberries, 5 Downing, 5 Houghton, and 1 Industry.

SET 22.—16 beautiful, everblooming Roses, 16 different sorts, all named.

SET 23.—12 Hardy Herbaceous Plants; 12 sorts.

We'd Like To Have You Visit Us

We cordially invite all interested persons, who live near enough for this to be possible, to come to see our Nurseries. We shall be glad to explain our methods to any visitors, and they will learn that neither money nor efforts are spared to have everything done in the best and most up-to-date manner. A visit to our place will convince buyers that unusual care is exercised to have all stock sound, thrifty, and true to name, and the confidence in our ability to take care of orders, no matter how large, is greatly increased. Our Nurseries offer

SOME SIGHTS WORTH SEEING.—During the summer months more than two millions of Peach, one million of Apple, one million of Pear, Plum, Cherry and Quince are budded. Upwards of two hundred and fifty men and women, with the aid of scores of horses and mules, help us to keep over one thousand acres in good order. Make up your mind to pay us a visit. We will try to make it interesting for you.

HOW TO GET HERE.—Berlin is situated at the junction of the Delaware, Maryland and Virginia Railroad (a branch of the Pennsylvania Railroad, which connects for all points north) and the Baltimore, Chesapeake and Atlantic Railroad, which connects with the Baltimore and Ohio for all points west. We are 242 miles from New York, 152 miles from Philadelphia, 124 miles from Baltimore, 164 miles from Washington, 160 miles from Norfolk and only 7 miles from Ocean City, Maryland's favorite summer resort, on the Atlantic ocean. Come to the seashore, get excursion tickets and pay us a visit.

A PARTING WORD TO THE FARMERS

An orchard, with the leading kinds of fruit trees, should certainly be connected with every farm. Growing fruit is not only a pleasant, but also highly profitable occupation. It will break the monotony of farm life, increase the revenues of the farm considerably and, what is the most important thing, fruit always presents ready cash. It will not have to be stored away until winter to find a profitable market, but can be converted into money as soon as ripe.

The Planting of Fruit Trees is a very simple matter. Dig a hole and set the tree so that it will stand as deep as it did in the nursery. Dwarf Pears should be planted deep enough to cover the quince stock on which they are budded. Fill the hole with surface soil, working it thoroughly along the roots and tramping it firmly when roots are well covered. Never let manure come in contact with roots. Leave the surface filling light and loose. No staking is required except for very tall trees. For the convenience of those who are planning the planting of an orchard, we give the following useful tables:

Distance for Planting

Standard apples.....	30 feet apart each way
Standard pears and strong-growing cherries.....	20 " " " "
Standard plums, apricots, peaches, nectarines.....	16 to 18 " " " "
Dwarf pears.....	10 to 12 " " " "
Grapes.....	rows 16 to 16 feet apart, 7 to 16 feet in row.
Raspberries and blackberries.....	3 to 4 by 5 to 7 feet apart.
Strawberries for field culture.....	1 to 1½ by 3 to 3½ feet apart.
Strawberries for garden culture.....	1 to 2 feet apart.

Number of Trees to an Acre

30 feet apart each way.....	50	10 feet apart each way.....	435
25 " " " ".....	70	8 " " " ".....	684
20 " " " ".....	110	6 " " " ".....	1,210
18 " " " ".....	135	5 " " " ".....	1,742
15 " " " ".....	205	4 " " " ".....	2,723
12 " " " ".....	300	2 " " " ".....	4,840

RULE.—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill, which divided into the number of feet in an acre, 43,560, will give the number of trees in an acre.
